Vol 3 No 37

Hesitant start for the Plus/4?

PRODUCTION delays now seem likely to ensure that Commodore's new Plus/4 micro will be in short supply this Christmas.

Work on the machine's four built-in Rom software packages was not completed until the end of August and this has delayed first production machines until October. Even then it may be some time before the Plus/4 can be manufactured in volume.

As a result, Commodore is now concentrating its efforts for Christmas on its 64 and new C16 machines.

The C16 is to be backed by a heavy TV advertising campaign. While advertising for the Plus/4 will be confined to

the national and specialist press.

"We feel there is a smaller market for the Plus/4, and this has been taken into account with the launch," said Aileen Bradley of Commodore. "It is far more of a serious home Computer, and not just for playing games."

The expected price for the Plus/4 has also risen since Commodore first previewed the machine in June. Then Commodore hoped it would sell at £249—now it will be priced at £299.99.

"Our initial price guidelines were underestimated, and also currency exchange rates have made it more expensive now," said Aileen Bradley.

Commodore's C16 ousts Vic 20

COMMODORE has confirmed that—with the launch of its new C16 micro this week—production of the Vic 20 has been ceased.

"The C16 will supersede the Vic 20," explained a Commodore spokesman. "The Vic will be sold in the shops while stocks last, then the C16 will take over. There are no plans to manufacture any more Vic 20s."

Of the major High Street retailers, Boots and Dixons both

confirmed that they would be selling off their existing stocks of the Vic and taking the C16 in its place.

The C16 is to be sold—like the Vic—as part of a starter pack costing £139.99.

Along with the machine, the package will include *Introduction to Basic Part 1* and four other software titles—*Picture Builder*, a graphic design aid, two arcade games, *Punchy* and *Zap*, and a chess program.

Gremlins at work again

SUICIDE EXPRESS will be the next release from Tony Crowther, the Sheffield-based Commodore 64 author, now working for Gremlin Graphics, responsible for top-selling titles like *Loco*, *Potty Pigeon* and *Monty Mole*.

He describes the new game as "Loco in the year 2000".

COMMODORE PLUS/4 REVIEW

INSIDE } AMSTRAD PAGE } RAPSCALLION } ART ON BBC }

Kokotoni Wilf

Kokotoni Wilf is an arcade adventure program whose undisputed intention is to steal the title of 'best arcade adventure program bar none' from Jet Set Willy. Kokotoni Wilf must recover all of the pieces of the legendary Dragon Amulet which has been scattered through time for his master the great magician 'Ulrich'. Throughout the quest Wilf comes up against many dangers from huge Prehistoric Dinosaurs to hostile alien Robots, but the reward for recovering all of the pieces warrants the risk. The 48K program features a number of major advances over Jet Set Willy. The games designer, ELITE, stresses that each of the games 60 plus screens settings is genuinely high resolution as opposed to pseudo high-res and doesn't require a title to explain what you're looking at. The Sprite characters are of cartoon quality and exhibit their own unique personalities. Impressive claims. Jet Set Willy fans will no doubt feel both sceptical and intrigued. Now they can find out for themselves!

Available September 15th for -

Spectrum 48K £5.95 (Cass.)
Commodore 64 £6.95 (Cass.)
..... £8.95 (Disc)

The Fall Guy

'Colt Seavers is a top Hollywood stuntman who uses the extraordinary skills he displays before the camera when moonlighting as a modern Bounty Hunter, who apprehends and brings in Bail Bond jumpers. Colt is ably assisted by his would-be manager Howie, his beautiful stunt girl protegee, Jody, and Terri the lady from the Bail Bond Company, who hires Colt when he's not before the cameras.

The cast of characters is:

Colt Seavers	LEE MAJORS
Jody Banks	HEATHER THOMAS
Howie Munson	DOUG BARR
Terri Michaels	MARKIE POST

Available October 20th

AVAILABLE Sat 20th October

Every single 'ELITE' product carries the unique 'ELITE' Holographic Sticker. Make sure your copy does, it's your guarantee of quality.

48K Spectrum
and Commodore 64

Mail Order: Just send a cheque or P.O. payable to 'ELITE' or quote your credit card no.

After the Spectrum, the 64 and the BBC, which are roughly competing machines, the big 'three'—are now moving apart.

Commodore has been the most conservative. Its new 16K/C16 is a Vic20 replacement intended as a 48K Spectrum-basher. Commodore's Plus/4 is really a tidied-up 64 with a less impenetrable Basic. Its four built-in software packages appear to be so simple that I can't see that they add much to the machine.

Sinclair is considered by some to have gone a bit off-beam with its QL. Yet the machine takes Sinclair into the impressive 68000 chip family. 128K is not to be sneezed at, the four Pison programs are workable and the machine is cheap.

Then there is Acorn. Acorn's ABM, expected to be previewed next week, is a full-blown business micro complete with built-in disc drive and bundled monitor. The machine is a direct development from the BBC and second-processor options—again the 6802 will be used to control, via the Tube interface, a choice of second-processor configurations.

The three companies' approaches differ considerably.

Commodore's Plus/4 is a conventional games/recreation machine which comes perilously close to stealing market from its existing 64 machine. Sinclair's QL is an original (and mostly successful) attempt to offer a powerful applications machine a realistic consumer price. And Acorn's ABM is intended as a low-cost work-horse for business, based on the BBC's proven technology.

Which will succeed—the tried and tested or the innovative and unconventional?

Software for M&S

MARKS and Spencer is to enter the software field, with three packages being launched under the St Michael label this autumn.

The three titles — *Games Pack*, *Start to Program* and *Games Maker*, will all initially be available only for the 48K Spectrum.

"The games are being launched on a trial basis. They will be sold first in just half a dozen stores. If they are successful, then more of the larger stores will stock the range," explained Chris Maynard of Grise-wood and Dempsey Computer Publishing, which wrote the games for Marks and Spencer.

"We have worked in conjunction with a number of software companies to produce these games. *Games Maker*, for instance, is a modified version of Quicksilver's *Games Designer*. The two games on *Games Pack* — *Fearless Frank* and *Frozen Penguin*, were originally published by Visions for the Commodore 64 — this is their first appearance on the Spectrum.

"*Start to Program* is based on a series of short programs we published in a book called *A Beginner's Guide to the ZX Spectrum*. The micro version was originated by ourselves and Triptych Publishing."

Grise-wood and Dempsey has also set up a joint publishing venture with Pan Books to produce four software packages under the Piper Sof-

QL takes off

THE first signs that the QL may be taking off could be seen at the 12th ZX Microfair, held last Sunday at Alexandra Pavilion in London.

Not only was the QL on sale over the counter for the first time — from the Sinclair stands but over ten of the exhibitors had QL material to show.

Two QL assembler packages were on display — one from Metacomco at £59.95, the other from Hisoft (as yet unpriced). GST showed its alternative operating system for the QL available on a plug-in board for £99.95, and a new software house Spectrascan demonstrated a range of QL games on microdrive at £12.

Stores pin hopes on new micros

A PICTURE of which micros will be available in which stores this Christmas is beginning to emerge. MSX machines from four manufacturers — Toshiba, Sony, Sanyo and Mitsubishi — will be available in limited quantities.

Commodore's new C16 and Plus/4 machines and Sinclair's QL will also be in the shops — the C16 and QL well before December.

Currys aims to have 2000 Toshiba HX-10 machines available this month. Boots and Dixons will also both take the HX-10. For Boots it will be the only MSX machine it will take.

Dixons, however, also plan to be stocking the Sanyo MPC-100 and the Sony Hit-Bit in October.

W H Smith will also be taking the MPC-100, and both Mitsubishi's 64 and 132K models.

The Sinclair QL will be taken by W H Smith, Boots and Dixons, so far, and Laskey's is considering the machine.

The Commodore C16 will be taken by Currys, Boots, Dixons, W H Smith (October), and probably Laskey's and Rumbelows. Commodore's Plus/4 will be taken by Currys, Boots Dixons and probably Laskey's and Rumbelows. W H

Smith has decided not to take the Plus/4.

Retailers are however apparently treating the Oric Atmos machine with caution. Currys has dropped the machine from its range, and Dixon's has not yet decided whether it will stock the Atmos this autumn or not. Meanwhile Laskey's has reduced its price for the Atmos to £119.90 — "We'll see how it sells at that price before deciding whether to drop it or not," commented a Laskey's spokesman.

● Most of the major chain stores have now dropped the 16K Spectrum — the machine is now virtually unobtainable in this country.

ware label. These titles, *Aircraft*, *Astronomy*, *Birds* and *Dinosaurs*, for the Spectrum and Commodore 64, have more of an educational slant. They comprise games, database material, and an illustrated book. Each package will sell at £7.95.

The Marks and Spencer titles are due for launch in October at £6.99 each.

Softek edge ahead

THE latest release from Softek's new programming team The Edge is *Psytraxx* for the 48K Spectrum.

Psytraxx uses The Edge's so-called 'Synergy' programming technique, which effectively gives the game over 1000 screens. Described as a 'giant maze adventure', the action takes place inside a robot's brain where the player must locate the robot's CPU and destroy it.

Softek International has split its various interests into two separate autonomous divisions. All further software releases will come out under the name The Edge, while still

Apricot set for PCW show

MANY companies will be using the Personal Computer World Show, at Olympia which begins on September 19, to launch their Christmas products.

Acorn and Enterprise will both have long-awaited microcomputers making their debuts at the show — the Enterprise 64K and Acorn's business machines, currently being tagged as the ABM series.

Apricot will be demonstrating its new F1, F1E and portable micros. The F1 has 256K Ram, a 3.5 floppy drive and business software bundled with it.

Touchmaster, the company headed by former Dragon Data directors Brian Moore and Ri-

chard Wadman, will have its graphics pad on show, while Sinclair will be selling QLs from the stand.

On the software side, Quicksilver is launching its range of autumn games, and *Sherlock Holmes*, will, at last, make its first public appearance.

Pision will have its Xchange business software — for the IBM PC and Sirius — on show. *Xchange Quill*, *Abacus*, *Archive* and *Easel* are enhanced versions of the bundled QL software for the business market.

The Personal Computer World Show opens to the public on September 20 at 10.00am. The entrance fee is £3.50.

being marketed by Softek.

The forming of a separate group also involved a staff shake-up. Softek retained only a few of its programmers to work in The Edge, while Marten Davies, formerly UK Sales Manager at Activision, was brought in to help set up the group.

Psytraxx could be available this month, priced at £7.95.

● The Edge is also considering converting its first release, *Quo Vadis*, for the MSX machines.

Fantasia games live on

ADVENTURE house Digital Fantasia has gone into liquidation.

Its range of Mysterious Adventures has however been saved. Prior to the company's demise, Channel 8 Software took over the series. Channel 8, which produced Commodore and Atari versions of the adventures, will not only continue marketing the series of 11 titles, but also release three additions to the range.

The new titles will be *Midwinter*, *After the Fire* and *Beyond the Infinite*, to be produced on Commodore 64, Atari, Dragon, Spectrum, BBC and Atmos.

Have you got what it takes to
build your very own monster?

FRANK N. STEIN

BY COLIN STEWART

NEW
RELEASE
AVAILABLE
SOON

THE SETTING: Professor F.N. Stein's laboratory in his Castle in the Black Forest.

THE TIME: 1884

THE GAME: 50 Screens requiring timing, logic and planning to complete.

THE OPPOSITION: Too many to list here but featuring: Snails, bats, ice (it makes you slip), firemen's poles, man eating pumpkins, spiders, slime (it slows you down), caterpillars, tanks, springs, light bulbs (they electrocute you), mice, lobsters, snakes, bumble bees, jack-in-the-box etc.

THE OBJECT: As you know, all the best monsters are hand built. Prof. Stein's life long ambition has always been to build his own monster - but first he needs all the bits!

You guide him around the dungeon picking up the bones - make sure you get the right order - then activate him by throwing the switch - the longer you take to complete each screen the higher will be the charge you give him - and the angrier he will become - so watch out!

Handmade Vic

Like M J Davies (letters, August 23 issue) I have experienced trouble with breaking wires on my Vic20 modulator. I eventually decided to fit it inside the Vic20 case.

This was easily done by screwing the modulator to the lid. A co-axial socket was then also fitted on to the lid and the relevant wires to the modulator were soldered to the back of the DIN output socket on the Vic pcb.

Elegant it may not be, but it was well worth the effort and my Vic is now trouble-free.

Programming structure

I feel that I must write to you after reading Mr George's letter attacking good programming style.

Mr George first attacks structured programming, saying that Basic should throw away all pretence of being a structured programming language because it includes Goto statements. Though they are completely superfluous except in error trapping, structured programs are far easier to write, debug and follow. It calls for a more reasoned and logical approach to solving problems. The pity is that beginners are not taught to program in a block structured programming language first of all.

As I think Mr George knows, recursion does not involve merely executing the same piece of code several times, it is when a procedure or function is able to call itself in order to perform a task. Recursion gives the same advantages that structured programming affords — which is probably why Mr George dislikes it so. There is also a bug in his program: the program does not work for the factorial of zero.

Mr George seems to prefer a ZX81, which originally sold for £100, to a 16K Spectrum for the same price. The Spectrum is the product of technology much superior to the ZX81. Does Mr George dislike tech-

nology as much as the excellent microcomputers it has brought.

I'm afraid that I cannot agree with any of the points in Mr George's letter with its Pythonesque 'Ee, when Ah wer a lad we didn't have any of this graphics stooft, tha knaws, we 'ad a wun byte memory mapped display an' wer proud of it' observation!

P Bhagat
Clare College
Cambridge

"It's most embarrassing — they want an Oric, a Vic 20 and a 16K Spectrum to give as Christmas presents."

Shades of Superbasic

When asked Ver\$, my QL responds with AH — all very well, but which version?

There must be differences — John Lawlor (issue 35) writing about procedures in issue 34's QL page finds problems only with Merge and Dline, while my QL says that all microdrive commands must have no strings attached. So most of the procedures were of no use. Incidentally, I have no problem with Auto 30000, so long as the increment is not too large.

Here are two instructive examples of Superbasic readers may like to stick in the 'boot'. They force upper and lower case from string inputs containing letters:

```
10 Input x$: Upc x$: Print x$
20 Input y$: Lwc y$: Print y$
30 Def Proc Upc (z$)
40 For z=1 to Len(z$): If code(z$(z)) > 90
   z$(z)=Chr$(Code(z$(z))+32)
50 End Def
60 Def Proc Lwc(z$)
70 For z=1 to Len(z$): If Code(z$(z)) < 97: Y z$(z)=
   Chr$(Code(z$(z))-32)
End def
Entering mixed upper and
```

lower case letters will cause one string of each to be printed. Such commands as written in my manual give error reports; the following may be helpful to some QL owners:

RENUM start TO end; base, step — with semi-colon after 'end' L/N

SAVE Mdv1 name, start TO end — with comma after 'name' to save parts or lines of a program.

Thrashing around

How threatened John Beckett of Manchester must feel to be thrashing around in all directions — 'Support the Electron' PCW Vol 3 no 36.

Perhaps his feeling that the world has let him down is linked to the item in 'News Desk' where we get a bit of an insight into the way in which the Acorn company thinks, that it is putting up the price of its second processor option to 'enable dealers to receive a larger margin on sales'. It even has the cheek to wrap this up as a service to the customer!! One assumes that it would never strike Acorn that a better way of helping both dealer and customer would be to be less greedy on the wholesale

price of its products?

Both of the BBC and the Electron are excellent machines, as in their own way were all the other machines that Mr. Beckett rages against, but it is surely obvious to everyone that they are Very overpriced.

Heavy on pink

I have been reading your magazine since it was A4 size, with nice titles on the cover in green, red and blue.

The reduction in size spoiled my home-made binders. Never mind, I thought, it's still a great mag. But the last straw was Vol 3, No 32. Being a biker (long hair, into heavy metal etc) I felt a right nancy walking up to the counter with a PINK edition.

Timothy Sheldon

Could this be the biggest selling disc since White Christmas?

A few months after its release, the latest disc from Lotus™ is now romping up the charts.

Symphony™ is the follow-up to that other catchy number, the Lotus 1-2-3™, itself the biggest selling integrated software disc of all time.

But Symphony's success isn't altogether surprising. It takes the proven benefits of 1-2-3 then adds a few ideas of its own.

The spreadsheet, for instance, is even bigger (8192 rows by 256 columns, to be precise).

The database is even better. Its graphics verge on the artistic (bar charts, line charts, not to mention exploded pie charts). All in colour.

Next, Symphony throws in word processing that matches the speed and the power of any popular WP program.

It adds communications that let you chat with computers anywhere.

And to cap it all you can put everything on the screen at the same time.

So that when you change the numbers in one window the graphics change in another.

But for all this, Symphony is easier to learn and simpler to operate than programs that do half as much.

To find out more about Lotus Symphony and the name of an authorised dealer call Teledata on 01-200 0200.

It may not capture hearts in quite the same way as Bing's disc, but for millions of executives it'll be music to their ears.

Lotus™ 1-2-3™ and Symphony.™

A Siel barks

Graham Taylor talks about music keyboards and computers to Vince Hill from Siel

For many people a major consideration in buying their micro was the possibility of experimenting with sound and music composition in a cheap, easy to understand, way.

Programs which 'turn your BBC into a synthesizer' or let you 'compose and edit your own compositions' have always done well, if not actually shot into the top of the charts.

People like to play music with their micros but, obviously, there are major problems — the Query keyboard isn't very suitable for playing music, the sound chips are not really that powerful, and it is difficult to use computer music in conjunction with other instruments.

A solution to all these problems which should also be soon quite cheap is provided by MIDI the digital communication standard which allows not only the linking of keyboards but also keyboards and micros.

In fact MIDI means much more than being able to add a keyboard to your micro — it means using your computer for composition, automatic notation, sequencing, and all kinds of other wonderful things.

In the past MIDI keyboards have been expensive and it is only recently that computer interfaces and software are becoming available. Now prices look like falling dramatically in a race between Yamaha with its CX5 MSX machine and expected new low-cost keyboards from Casio and Siel.

Siel's Vince Hill is one of those actively involved in promoting MIDI in this country, and I asked him how computers fitted in: "There are some interesting similarities between the keyboard and computer industries — the computer industry is much newer but with something like MSX the two areas overlap."

MIDI can be dated not by the release of any one item of equipment, but by the signing of the MIDI charter — literally a piece of paper that most major keyboard manufacturers signed in which common electrical fittings and standards were agreed. "It had a long gestation period before it finally emerged and even then some of the early MIDI machines didn't really communicate properly with one another — information like keyboard velocity, the speed at which you press the keys on a touch-sensitive machine — has taken a while to get right."

Electronic music is digital information, information in the form of binary digits, and the same language is used by both keyboards and computers — they sometimes even use the same or similar microchips. It was inevitable, therefore, that the two should be linked.

The MIDI computer link gives musicians a powerful composing tool and polyphonic sequencing, and arranging. "What you have to remember is that the keyboard market has one big problem associated with it — the people who are going to buy it need some skill — some sort of technique or flair for music." The cheap-end portable keyboard manufacturers have spent a lot of time producing endless devices providing new ways of making it easy for the

One of Siel's first MIDI software packages — a programming tool for their MK600 synthesizer

non-musician to quickly acquire enough skill to play satisfyingly — auto chord and bass accompaniment, lights that flash as each note is played by the machine, LED's that tell you what key your playing in etc etc.

MIDI will enable software houses to create music education programs that use the TV monitor and test and encourage budding musicians on a real keyboard. Not only will these programs ask you to 'play the key of C' but they will also judge how smoothly and quickly you managed it and

give you appropriate advice.

"The computer users can gradually be drawn through, just playing about with sounds, to a real understanding and sense of purpose with their music — with the right software it could be like having a music teacher in your home, twenty-four hours a day."

If the MIDI keyboard-computer link really takes off then it will quite probably change the way the keyboard manufacturers think about the way their hardware is marketed.

"If you take something like the cheap Casio keyboards with their dozen or so preset sounds and rhythms you can see what might happen — Casio put on a number of presets because they know that the market they are aiming for wants something nice and simple — they are not looking for a DX7 where they have to spend five hours constructing the sounds."

"So Casio choose some basic sounds and put those in as presets even though the chip that generates them is probably capable of

Street Life

put voices into computers without using hardware.

Next year Siel is planning a range of keyboards capable of being controlled by computer with prices starting at about £190. Also a substantial portable keyboard with MIDI called the MK900 is available from Siel for just over £400.

This keyboard will be able to use the existing Siel software/hardware interfaces for the Spectrum and Commodore 64 (the BBC version is expected soon) and a growing range of educational software.

"There will be an increasing number of computers supported — Siel would very much like to do something with the QL. With multi-tasking and windows we could do wonderful things and with 128K — we can store a vast amount of music — unfortunately Sinclair are not very helpful though."

For those who, like me, fancy the idea of making music and want something else to do with our computers MIDI is going to offer a lot of new alternatives. And by next year it should be cheap too.

In the end though what you get out of it will depend on you. As Vince says, "No matter how much technology you have in the final analysis it's up to you and what you do with it — music is the whole thing, the only objective there is."

making quite a few more; it's a compromise for the sake of simplicity.

However, if the keyboard has MIDI then it's easy to give it extra facilities via the computer so that it is possible to experiment — MIDI opens up the lower-cost keyboards for more complex applications."

A computer link should make cheap sampling possible too. Sampling is where

an analogue sound is fed into a machine via a microphone, or from tape, and turned into digital information and stored — then it can be altered or converted into notes for a keyboard and played — you could store, for example, the sound of a voice playing a single note and then play it at any note over as many octaves as you want. This is the same technique that is sometimes used to

Solid and sturdy

David Lawrence takes a look at the machine on which Commodore is pinning high hopes — the new Commodore Plus/4

It is inevitable that the Plus/4, Commodore's new home micro, should have to face comparison not only with the machines of competitors, but also with its own best selling Commodore 64.

With that in mind, perhaps it is only fair to say from the outset that the new Plus/4 is not a bigger and better version of the 64. Rightly or wrongly, Commodore has chosen to go down a very different path than that which the 64 might have indicated.

Gone are the sophisticated Sid and Vic chips which gave the 64 the sound capabilities of a synthesiser, and graphics wonders like sprites. The problem with all these marvellous facilities was always that they were never integrated with Basic and it was only the best of programmers who could ever really make use of them.

With the Plus/4, Commodore has aimed a machine squarely at the average user. Experienced programmers will find many nice touches and elegant programming structures to play with but it is the ordinary domestic user who will notice the real difference. Here is a machine which has all of its major facilities available from a new Basic, version 3.5 and a full 60K available for programs on the 64K versions.

I have been working and playing with the finished version of the Plus/4 (without the built in software packages) and its smaller brother, the C16, for some three months now, and during that time it is fair to say that it has grown on me immensely. The first impression, and a continuing one, is of good design, solid manufacture, thorough preparation before release and the capacity to listen to the pleas of existing owners on the limitations of the 64. Physically the Plus/4

has a robust feel to it and while the keyboard seems little slack, it has not revealed weaknesses under intensive usage.

Specification

The Plus/4 appears to have been styled by the same team responsible for several of the Japanese MSX machines. The almost black casing has space-ship lines and sets off the main keyboard of 58 ivory coloured keys plus space bar to perfection (well anyway I like it). Eight programmable function keys (four keys, two on each), a convenient cluster of cursor keys, and a power light complete the top. The main keyboard is slightly dished for easier typing.

Briefly, the Commodore Plus/4, like its relative the Commodore 64, has 64K Ram. But whereas the C64 has only about 39K of Ram available for programming in Basic, the Plus/4 has 60K available to Basic.

The machine has a 32K Rom containing the operating system and Basic and the machine also includes four in-built software packages contained on Rom chips.

It is from these four software packages that the machine takes its name — they are a word-processor, a simple spreadsheet, a database program and a graph-plotting package.

Seven function keys are provided — together with a *Help* function key.

The Plus/4 also has a simple built-in machine-code monitor with 12 commands. The machine is based around the 7501 processor chip — a development of the 6502 used in the 64 and the Vic20.

Up to 121 colours can be displayed. The maximum graphics resolution is 320 × 200 pixels and the text display mode is 40 × 20 characters.

Sockets are provided at the back for monitor, joysticks, disc drive/printer, RS232, power, and cartridge. TV output comes from the left whilst an on/off switch occupies the right along with a reset button. And all that finning along the top also acts as a grill for ventilation.

Separate manuals are provided for Basic and the 3-Plus-1 integrated software. These give tutorial instruction for beginners and reference sections for memory lapses. The Basic manual is well presented and gives sufficient information to use the machine.

Plus/4 Integrated Software

The Plus/4 comes complete with built-in software (named 3-PLUS-1 by Commodore) for word processing, data filing, graphics, and setting up spreadsheets.

The software has the advantage of a high degree of integration — that is the programs can exchange data, tend to use common commands, and are all resident in memory at the same time.

The software is, of necessity, rather limited in scope though because it is supplied on a couple of solid-state Rom chips fitted inside the machine.

The advantage is that access to the packages is instant — at the touch of a function key.

The disadvantage is that that size of the programs has had to be kept pretty short — a far cry, for example, from their equivalent programs on the QL.

Judging from a demonstration of the four Plus/4 software presented by Commodore at June's Chicago CES show the programs will, as suspected, be rather primitive.

In the word-processor for example, such refinements as right-justified, centred or highlighted text are not available.

The graphics package looked particularly disappointing. Information from the

spread-sheet can be displayed only in the form of a bar-chart (pie charts are apparently not possible) where the bars are built up out of ordinary character-square size # signs. Each bar can therefore only be accurate to plus or minus the height of one character square. Only one set of data can be represented at a time.

Ease of programming

When the time comes to program the new machine, existing Commodore owners will be relieved to know that the Plus/4 keeps to the same tried and tested full-screen program entry and editing methods.

Commodore has recognised this strength and even built upon it with a whole series of extra editing capabilities called up by *Escape* sequences (*Escape* followed by another key).

The overall effect is that developing a program is even easier on the Plus/4 than on the 64 and, accordingly, streets ahead of most of machines on the home and personal market.

Programming structures

Many of the new machines coming onto the market this year have followed BBC Basic in moving away from the use of *Gotos* and *Gosubs* as a programming style by means of *Do* loops, extended *If* statements and procedures.

With Basic 3.5, Commodore has opted to not provide procedures or even an extended *If*, a fact that will disappoint many purists, but instead has chosen to concentrate on flexible repeat loops.

As well as the standard *For... Next* loops, the Plus/4 supports *Do... Loop*. Conditions based on either *While* or *Until* (eg *Do While X > 10* or *Do Until X <= 10*) may be attached to the beginning or end of a loop so that there is almost no action based on a decision which cannot be expressed in a straightforward form.

In addition to terminating a loop with the *Loop* instruction, the *Exit* command allows execution to jump to the line following the end of the loop. Combinations of *Do* loops with *Exit* allow the simulation of the extended *If* found on some new machines. This flexibility in the loop instructions means that the Plus/4 is the first home micro from Commodore where the *Goto* command effectively becomes redundant.

The other major programming structure provided is *Trap... Resume*. *Trap* [line number] at the beginning of a program section will send execution to the specified line whenever an error is detected which would otherwise have stopped the program. Having detected an error, the system variables *Err\$*, *Err* and *El*, which will return the current error message, the error number and the line in which it occurred, allow the program to selectively deal with different kinds of problems. Finally, with the error having been dealt with, *Resume* allows program execution to recommence either at the line which first produced the

error, at the following line, or at any specified line within the program.

Graphics

In return for the loss of sprites, which everyone praised and only a small proportion of 64 owners ever used, Basic 3.5 provides a useful set of graphics capabilities which can only be described in outline here.

Line and shape drawing commands include *Draw*, *Circle* and *Box*. *Draw* is a standard line-drawing command, while *Box* allows the drawing of a rectangle on the basis of the co-ordinates for two opposite corners. Most flexible of all is the *Circle* command, which will draw any regular shape from a straight line to a circle, including the facility to rotate the shape or to stretch it along either of its axes.

Closed shapes may be coloured by use of the *Paint* command.

Graphics modes

Like the 64, the Plus/4 does not automatically reserve memory for a high-resolution graphics screen on start-up. The default screen mode is a standard 25 lines by 40 characters. Other screen modes are set by use of the *Graphic* command.

Graphic 1 provides a full 320 x 200 high-resolution screen, occupying 10K of memory in total (including colour attributes). The full range of colours is permitted on the screen in this mode, with the limitation that only one foreground colour is available in each character square. Text is supported in all modes by the *Char* command, which also supports screen positioning in low and high resolution.

Graphic 2 mode is similar to *Graphic 1* except that the bottom five lines of the screen are maintained in normal text mode and can be written to by use of *Print* statements.

Graphic 3 is a half-resolution multi-colour screen which allows two foreground colours to be resident in the same character square in return for a minimum resolution of two pixels horizontally, which makes for rather unsatisfactory lettering when text is displayed.

Graphic 4 is the split-screen version of *Graphic 3*.

Finally, *Graphic 0* returns the screen to normal text mode.

One useful feature of all these screen manipulations is that once reserved, the high-resolution screen is not overwritten unless the memory allocated is freed with the *Graphic Ctr* command. It is possible to shuttle between high- and low-resolution screens without damage to either, a useful facility for the would be games writer.

Colour and low resolution

The colour and low-resolution capabilities of the Plus/4 are outstanding, even better than on the 64.

The full Commodore low-resolution character set is available, making possible a great many effects which would only be available in high resolution on other machines. Sixteen main colours can be displayed, all of them specified from Basic with the *Color* command (yes, unfortunately it is the American spelling). In addition, however, the 'luminance' (brightness) of a colour can be specified, providing a total of 120 shades, plus black.

Other graphics commands

Apart from the standard drawing commands, there are a variety of other useful graphics facilities. *Rclr*, *Rdot*, *Rgr* and *Rlum* are functions which return information on the current print colour, the position and colour of the pixel at the current cursor position, the current graphic mode and the currently prevailing luminance.

SShape and *GShape*, similar to the Microsoft *Get* and *Put* commands first seen in this

country on the Dragon, allow small areas of screen to be stored in the form of string variables for later replacement.

Sound

As with the graphics capabilities, the Plus/4 is a simpler machine than the 64 when it comes to sound, and most users will find it easier to use.

SABRE WOLF

THE GREEN
ASHBY DE LA ZOUCH
LEICESTERSHIRE LE6 5JU

48K SINCLAIR ZX SPECTRUM
£9.95

Hardware Review

The main command is called, simply, *Sound* and specifies the number of the voice to be played (there are three, including a white-noise channel), the value of the note and its duration. Unfortunately, the *Sound* command does not support a sensible set of values for musical notes, so the user has to resort to tables of values and calculations if music is to be played. The shape of note produced, although fixed, is more pleasant than the average *Beep* and some attractive results can be achieved

with very little effort compared to the complex settings necessary for the 64's *Sid* chip.

Disc commands

The Plus/4 must be the first home micro to be launched in this country to take account of the growing emphasis on disc — rather than tape-based systems.

The machine will work with the current generation of 1541 drives (via the serial port) or with a promised new breed of drives which will use the parallel port and transfer the data at twice the speed. All the normal disc commands have been made a part of normal Basic, rather than having to be sent down a specially opened channel in a relatively inscrutable form. In addition, the disc operating system error numbers and messages are available in the system variables *Ds* and *Ds\$* to cope with any problems which may arise during disc access.

Basic

There is very little in Basic 3.5 which could be described as new. Rather it would seem that Commodore has gathered together some of the features which users have come to expect from the better dialects of Basic. Some of the more interesting features are: *Auto* — auto line-numbering facility. *Dec* — function returns the decimal value of a hexadecimal string. *Delete* — removes specified lines from the program. *Getkey* — creates an indefinite wait for a key press. *Hex\$* — function returns the hexadecimal form of a decimal number. *If... Then... Else* — *If... Then* extended by the provision of *Else*.

Instr — string search function, returning the position of one string within another.

Joy — function returning the current position of the joysticks.

Print Using — compared to many other versions of Basic this is quite a powerful version of this useful formatting tool, extended even further by the addition of the *Pudef* command, which allows characters in a standard *Print Using* format to be redefined.

Renumber — standard renumbering of lines, *Gotos* and *Gosubs*.

Tron and *Troff* — the standard debugging facility, printing out the number of lines being executed as the program progresses.

Rstore — the added facility to specify the line number from which *Data* will be read.

The Monitor

The built in machine code monitor, *Tedmon*, is not and does not claim to be a full assembler package but instead more of a powerful tool for the development of shorter pieces of coding. Each line of assembly language has to be entered, checked and processed separately, making any extensive coding, and especially alternations to existing programs, fairly tedious.

Having said that, *Tedmon* does provide an assembler and, in addition, a disassembler and a wide range of machine-code monitor facilities like searching and displaying memory, transferring blocks of memory, filling memory areas with specified values, saving and loading memory areas to disc or cassette, and displaying the current state of the registers. Machine-code programs can also be executed from within

Tedmon but, unfortunately, there is no trace

facility to allow a faulty program to be stepped through, a major limitation in the frustrating process of developing new code.

Whatever the limitations, however, the instant access to *Tedmon* and, through *Tedmon*, to the memory and machine-code/assembly-language programming and the standard 6502 mnemonics, ensure that the Plus/4 is going to be a popular machine with machine-code buffs of all ages and levels of skill.

Conclusion

Who is going to buy Commodore's new baby? Well, with its friendlier Basic it becomes an obvious candidate for the first time user who wants a well thought out and produced machine with the inevitably high level of software support that accompanies any new Commodore machine.

Existing owners of the 64 who are more interested in the quality of the *Basic* on their machine than the cleverness of the sound and sprites, may well be tempted by the fact that Commodore's emphasis on compatibility has ensured that existing peripherals like printers and disc drives (though not the cassette recorder) will all work with the new machine. In fact, even Basic programs from the 64 can be transferred to the Plus/4 and will run without difficulty provided they make no use of *Peeks* and *Pokes*, which may well crash the system.

As for other users, the Commodore Plus/4 is not going to set fire to the imagination of micro-snoobs who are interested only in new and exotic developments in Basic.

What it will do though, I think, is allow a great many owners of existing machines, whether it be a Spectrum, a Dragon, an Oric or whatever, to move up comfortably to a more powerful and more amenable machine.

The success of the machine will of course also depend on the quality of the built-in software packages — they are one of the main selling points of the machine.

Being on Rom they are quick to access but fairly simple in scope and this may limit the serious application of the machine.

Imperial

Program *Empires Micro*
Spectrum Price £19.95 **Supplier** Imperial Software.

Ever fancied coal mining the universe? Well take a look at *Empires* — an unusual four-player game from Imperial.

As an intergalactic Ian MacGregor your mission is to mine other solar systems for their mineral wealth, not forgetting to build large military fleets to protect your expansion from like-minded alien tycoons.

For your £19.95 you get a fancy packet containing three player cassettes, an umpire cassette and various cardboard maps and cards which certainly look impressive, but which, according to the instructions, are not essential to the game.

Each of the three players takes it in turn to load a cassette

into the Spectrum, choose their fleet movements using a system of menus and a cursor, and save this information on another cassette which is then passed on to the umpire for processing.

The umpire then loads all players' data files, calculates the outcome of any moves or battles, and returns the results on cassette to each player.

This procedure is then repeated for each move. There is also a facility for sending messages to each player via the umpire for the purpose of making alliances or gratuitous insults.

Empire players will need to be pretty dedicated, as with one move every couple of days a game can go on for weeks.

An unusual idea, but the hassles involved in actually involved in actually specialising the logistics of the game remove most of the fun.

Nigel Lackey

Word Play

Program *Computer Scrabble*
Micro Commodore 64 **Price** £12.95 **Supplier** Leisure Genius

Computerised board games or card games are often difficult to justify, since they usually only provide a less convenient way of playing the standard game, without giving you any extra facilities.

However, *Computer Scrabble* from Leisure Genius is worth looking into, because it actually does give you much more than just a way of playing the game on a TV screen.

Although at its simplest it can

be used as a means for two to four people to play *Scrabble* on the TV, the program can do much more than this. Most importantly, the computer can play the part of one or more (even all) of the players. It can play at one of four skill levels, and each computerised player can have a different skill level if required.

At the highest skill level the computer provides quite a challenging opponent, although rather a slow one! It has a vocabulary of 11,000 words, which isn't vast, but is big enough for a reasonable game.

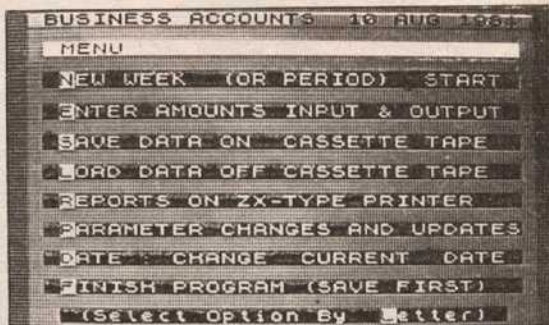

There are a number of other playing options. One of the nicest is the facility to watch the computer 'thinking', ie you can

see the words it makes up and tries until it finds the best. If you wish to, you can see all your opponents racks, but this seems a bit like cheating. You can also choose whether or not to have sound effects, and how fast the computer places its words on the board.

All in all, this is an impressive

program. It simulates a pretty good *Scrabble* player, and provides a number of nice features which aid the game. The board and racks of letters are clearly presented, and the whole package is very easy to use.

Richard Corfield

Cash in hand

Program *Simple Business Accounts, Micro Spectrum Price* £11.95 **Supplier** Flowchart Limited 62 High Street Irthlingborough, Northants

In the midst of the invaders and aliens there is a constant call for serious software for the ZX Spectrum, and this program is aimed fair and square at that market.

In itself it represents a good piece of programming, demonstrating just what can be done with Basic, but I am not sure quite where it expects its market to be.

Entering data is tedious in the extreme, even with the use of an add-on keyboard. The program is designed to be very user-friendly: most options are selected by a single key-press and data is entered direct to the screen rather than by input statements. The difficulty with the combination of this and Basic is in the speed at which events happen — or rather the lack of it. Most small businesses would get on faster with a cash book.

One advantage of computing the accounts is in accuracy, but this requires a "single entry" system, where data is entered just once. *Simple Business Ac-*

counts, however, requires you to keep a hard copy print-out each week and then re-enter all the weekly totals at the end of the year. It is a shame that a reasonably competent program should be spoiled by this omission especially when full microdrive support is given. Why isn't there a routine to load each week in turn onto Microdrive and take the information off these directly?

The manual that comes with the tape is just eight sides long, and although it claims on the back that the program is fully tested and approved in use in small business with turn-overs up to £1 million, I find that hard to believe. The booklet also claims disc drive support, but there is no evidence of this in the program itself.

I suspect that *Simple Business Accounts* is an also-ran. I know that sounds harsh, but the market is a harsh one for this software, and I don't think that the program is good enough to be worth buying for any except the very small business person who may want a low-cost introduction to computerised account.

Even then, my advice would be not to throw away the accounts book just yet.

War wager

Program *Battle for Midway*
Micro Commodore 64 **Price**
£9.95 **Supplier** Personal Soft-
ware Services, 462 Stoney Stan-
ton Road, Coventry, CV6 5DG.

Midway from PSS is one of the most complicated and difficult computer games I have yet encountered.

It is essentially a sort of graphics plus action adventure game, based on the *Battle of Midway* which took place in the Pacific during World War II.

In the game you are the commander of the American forces protecting Midway, and

you have to defend the island against Japanese attack. As in the real battle, the Japanese will give up if their four aircraft carriers in one of their fleets are sunk, so in order to win, your main objective is to find and destroy these ships.

All the various forces at the disposal of the Japanese and American commanders are represented in the game, and the Japanese will follow basically the same tactics as in the war.

However, this leads to much complexity since the forces are large and varied, and are divided up into many different combat units. The facilities for controlling the forces and for examining their status also take quite a bit of mastering.

The game takes place in real

time, and the Japanese attacks are simulated in arcade-style

action which is all quite well done. **Richard Corfield**

Labyrinth

Program *Rapscallion* **Micro**
Spectrum **Price** £8.95 **Supplier**
Bug-Byte, Mulberry House,
Canning Place, Liverpool.

Rapscallion — the new game from Bug-Byte — has so far received a good deal of pre-publicity and after playing the game I would say that it was all justified.

The game challenges you to move through an arid wilderness, consisting mainly of dungeons of one sort or another, through a labyrinth and into your castle, stolen from you by

the dreaded Rapscallion the Rogue.

You have six lives, and two identities: bird and a fly. As bird you are vulnerable to dangers such as cats, whereas as fly you are safe from these, but prey to spiders who don't bother the bird.

There are a very large number of locations, and a good selection of barriers and hindrances to be overcome.

Bug-Byte deserve their good reputation, and this game will enhance it further. Recommended.

Simon Springett

Black blob

Program *Atom Smasher* **Micro**
Amstrad CPC64 **Price**
£6.99 **Supplier** Romik, 272 Ave-
nue, Slough, Berks.

Romik, who seem to believe in quantity rather than quality, have added yet another computer to their catalogue — the Amstrad. This game is a conversion of an old Vic20 game. Sad to say, the game might have been good on the Vic, several years ago, but now on the Amstrad, it looks a bit old hat.

You are a 'greater-than' sign, or an arrow-head. You can rotate and move in the same way as in *Asteroids* (remember that?). And, of course,

you can fire. When you have shot the black blob, another electron appears, and you have to start again, trying to shoot another black blob. By the time there are four or five electrons flying around the screen this gets quite tricky — you have to keep an eye on all the electrons, at the same time as trying to shoot the blob. I ended up by being very frustrated by this and yet, because the game is so simple, this did not turn into wanting another go. I just remained frustrated.

This might sell, as it is cheaper than Amsoft's close to making use of the Amstrad's advanced graphics capabilities.

David Lister

Gold mine

Program *Gilligan's Gold* **Micro**
Commodore 64 **Price** £7.95
Supplier Ocean Software,
Ocean House, 6 Central Street,
Manchester 2.

The author of the very popular *Manic Miner* has got a lot to answer for.

The number of imitators of that style of game continues to increase. One of the latest in this vein to appear for the Commodore 64, *Gilligan's Gold* from Ocean Software. This follows the standard pattern for this type of game.

You have to guide Gilligan through the mine workings to collect bags of gold and place them in a wheelbarrow. You make your way around the

mine via platforms, ladders and lifts, avoiding the outlaws who are out to get you and the gold. You have a limited time in which to collect the bags, but each one you get gives you more time.

This is all very much standard stuff, and the game lacks anything which really distinguishes it from many other similar efforts. Nevertheless, it is quite enjoyable and not badly programmed. However, the graphics and sound are definitely run of the mill.

There are plenty of better versions of the same type of game on the market already, and most of these give more variety and interest than this one.

Richard Corfield

Check list

Program *Physics O-Level Revision* **Price** £6.95 **Supplier**
Longman Software, Longman
House, Burnt Mill, Harlow, Es-
sex CM20 2JE.

Unfortunately, the subject of this review arrived too late for the market for which it was intended.

Physics O-Level Revision from Longman Software is one of those once-a-year things, intended to help students with their revision.

The cassette contains five programs. Four cover some of the major areas of the subject

and one acts as a sort of reference index to topics in Physics. This reference program will list out all the topics which are related to a particular area of Physics, so that you can use it as a kind of check-list to ensure that all the relevant items have been revised.

The other four programs cover formulae, circuits, light and mechanics.

This is a well planned package, however, it is very much a nice little extra to the main revision material, which remain as notes and the text book, and is not a substitute for them.

Richard Corfield

Magic potions

Program Merlin Micro
Commodore 64 **Price** £6.95
Supplier Wye Valley Software,
Parton House, Kinnersley, He-
refordshire.

Merlin from Wye Val-
ley Software is very
much a typical high-
speed arcade action type of
game, although the setting is a
little different.

You take the part of the
wizard Merlin, who is being
attacked by various evil crea-
tures. You can destroy your
opponents by casting spells on
them, but your magic energies
are limited, and must be resto-
red occasionally by brewing
up a magic potion.

To do this you must collect
various delightful ingredients
like a skull, a frog's leg, an eye
and a shimmering crystal. Not
surprisingly, the creatures do

their best to stop you. When
you do manage a successful
brew-up, your powers are fully
restored and you move on to
the next level.

If you stick to the standard
arcade-game tactics with this
one you won't go far wrong;
shoot everything that moves

and collect all the bits that
don't. Although the principle of
the game is not new, it is well
presented with nice graphics
and sound, and the action is
certainly fast. Definitely worth
a look if you are an arcade
action fan.

Richard Corfield

Flippers

Program Gate Crasher Micro
Spectrum 48K **Price** £8.95 **Sup-
plier** Quicksilver.

Gate Crasher is a re-
freshing change from
the normal 'shoot-em-
up' games on the market, al-
though the idea is still quite
simple.

Barrels are released from the
top of the screen, and you must
manoeuvre an intervening
maze to guide them to slots at
the bottom. This is further
complicated by flippers within
the maze which will deflect the

barrels making their way
down.

The combination of concen-
tration (needed to drop the
barrels into the right slots to
complete the screen) and pure
reaction makes this a challeng-
ing and addictive game.

For extra incentive, Quicksil-
ver have put forward a £200
prize for the first person to
complete Screen 7. The game
is Kempton joystick compa-
tible, and has user definable
keys, which will enable other
joysticks to be used.

For those who prefer their
arcade games a little different
it is definitely recommended.

Philip Martin

Flower-pots

Program Jump for your Life
Micro Spectrum **Price** £8.99
Supplier Unique, 16 Thorne
Lane, South Iwer, Bucks.

Jump For Your Life, says
the press release, will have
you jumping mad, and
there's no denying that this is
true.

The tape is an arcade-type
game setting you in the role of a
climber attempting to scale the
outside of a large skyscraper.
As usual, I never did discover
just what reward there was for
reaching the top, but I was able
to suffer the various fates in
store for the unwary. Rough
looking men appear at the
windows and push you off the
edge, or possibly drop a
flower-pot on you.

The game uses sprites well,
and though the claim about

"smooth-scrolling action" was
hardly justified, the game does
use colour to good advantage
and has music at the beginning
that would grace a real arcade
game.

As you play, unfortunately,
the music has to be left out to
allow the Spectrum to cope
with the graphics.

This would never be my
favourite game. In particular,
the keyboard controls are
cramped together in one part
of the keyboard and seem
designed for ET to use, rather
than a human. My other grouse
is that the falling flowerpots are
sometimes released so close to
you that there is no opportunity
to avoid them.

Dedicated arcade fans will
probably enjoy this one, but the
rest of us may well find it a
bore.

Simon Springett

Symbiotic

Program Rogue Ship **Price**
£7.95 **Micro Spectrum Sup-
plier** Alan Pywell 3 Cleve Ave-
nue Matlock Derby DE4 3BD

Praised be the Quill. An
outpouring of well-
constructed adventures
from people who would
otherwise not have the pro-
gramming skills to write them.
Rogue Ship is a Quilled adven-
ture which will, form the first
part of a trilogy called *Ear-
thquest* about the search for the
lost planet Earth.

It is different - instead of a
help command, you consult

Inman, a symbiotic being who
lives in your body and occasi-
onally makes helpful, unhelpful
or irrelevant comments at time-
ly, untimely and irrelevant mo-
ments. It's also incredibly de-
vious, much furious note taking
and map making is required.

Rogue Ship has much to
recommend it - cleverly
constructed, apparently
lacking in spelling mistakes,
witty(ish). I really only have
two complaints, firstly why
spaceships, lasers, etc, why not
make the plot really original,
and £7.95 is a bit steep.

Ian Waltham

Into overdrive

Malcolm Bryant shows how Spectrum Microdrives can be used with the QL.

Sinclair claim that the Spectrum Microdrives are not compatible with the QL. This means that you cannot take a cartridge with a Spectrum program and read it into the QL, which is not really surprising.

However, it is possible to connect Spectrum Microdrives directly to the QL and they will then work exactly as if they were additional QL Microdrives.

Proceed as follows. Take your Spectrum

Microdrive(s) along with their connecting cable and plug into the QL Microdrive expansion port on the right-hand side of the computer. By putting a single twist in the cable, the Spectrum Microdrive(s) can sit on top of the QL Microdrives. You will now find that these drives can be accessed as MDV3, MDV4 and so on. This can be extremely useful. A practical example of how four drives can be used is while running the Psion packages. The back-up

commands (eg, Archive) are almost worthless with only two drives, since a file cannot be copied from MDV2 on to a new cartridge, unless it is to MDV1 which is not normally what is required. Now files can be backed up from MDV2 to MDV3 — far more convenient.

A further tip when running Quill. To improve the speed of the Microdrive operations, keep your document on MDV3 (if you also have MDV4 then put your back-up cartridge in there). The work file *def.doc* will still be written to MDV2 and file reading and writing then be faster, particularly if you can keep a lot of free sectors on MDV2.

Another string . . .

Use this program by Richard Snowden to edit and write text using Quill.

This program is very useful as it allows you to edit or even write programs using the word processor, Quill and then convert the text to a machine readable form so that the edited program can be tested.

The following is a fools guide to using this Quill utility.

- 1) Load program to be edited, eg, load *mdv2_invaser* (if the program is called 'invaser')
- 2) Save this program with the extension *_lis* so that it can be loaded into Quill. eg *save mdv2_invaser_lis*
- 3) Boot Quill, eg, *lrun mdv1_boot*
- 4) Choose the import option on Quill (under 'Files' on the second command screen) to load the program to be edited, eg,

Import, *invaser_lis* (making sure *invaser_lis* is on *mdv2*)

- 5) When it's loaded, press ESC to leave 'Files' and edit the program using any of the ample features of QUILL. I used QUILL with this program to replace short variable names with long meaningful ones and split multi-command lines. It could also be used to move blocks of code to the end of a program and head them as procedures, etc.
- 6) When finished editing, use the 'Save' option (on the first command screen) to save the program, and then *Quit Quill*.
- 7) Load this utility, and enter the drive number of the program and the name you saved it as, and the file name you

want the loadable version to be.

- 8) When the utility is finished, you will be able to load the final version of the edited program.

This utility is needed because Quill saves text (documents and programs) with excess codes (linefeeds, page markers, margin information) padded around the text. This utility strips all of these characters from the program proper, enabling it to be loaded. I have taken advantage of the fact that Quill saves text unjustified. This is the reason it takes such a long time to Save and Load — when a document is loaded, the characters are read one at a time from a file, and each line has to be justified as it comes. Similarly, Quill has to reformat/unjustify text before filing.

As the present generation of mainframe/mini users have found, it is much easier to write and edit programs using a word processor. I hope that with the help of this utility, other QL users will realise this too.

Putting the record straight

Alan Went presents a relocatable machine code bubble sort routine

A common use for computers is the sorting of lists of data into alphabetical or numeric order. The simplest form of sorting, and that most used by home programmers, is the 'Bubble Sort'. This is a simple, easy to understand Sort method, but in its Basic form is very slow.

This article gives a machine code bubble sort that is very much faster in operation.

Bubble sorting involves comparing each item in the list with the following item swapping if that next item is 'smaller'. The checking continues until no more swops are required.

Both the Basic (List 4) and the machine code routines (Lists 1 and 3) presented here

work in the same way, taking data in an array *AS(YY ZZ)* and sorting strings *ZZ* into ascending order. Both routines use approx 300 bytes, but the Basic version will sort an array *AS(100,1)* in approx 4 min 17 secs and the machine code version sorts the same array in 1.7 Secs.

When comparing with a fast Basic sort (Shell Sort) the times for an array $AS(309.33)$ were:

Basic Bubble — over 1 Hour: Basic Shell — 4 Mins: Machine Code Bubble — 30 Secs.
The machine code sort routine checks

The machine code sub routine checks the list for the last string used (checks for space in position `AS(YY,1)`), thus ensuring that unused blank strings are not moved ahead of data strings.

The code is relocatable and thus can be run in any area of Ram except the printer buffer (5B00h on) as this area is used with the position in string "ZZ" from which sorting is to take place; ie, **POKE 23299, 10** will sort by order **AS/XX 10 TO**.

The maximum length of 'ZZ' should not exceed 245 bytes. To use routine load data in List 2 into RAM starting at 32000 then Save "SORT" CODE 32000,362. The code can then be reloaded into any position by Load "SORT" CODE XXXXX. To sort use RAND USR XXXXX or LET X = USR XXXXX. (See List 3).

List 5 shows the routine put into practical use in arranging an index for magazine articles.

PSYDRAGON

The second from The Edge.
The first ever Mega-Game for the
48K Spectrum; over 1000 screens of
unbelievable arcade adventure.

Design of the times

Thomas Ellenrieder's program enables you to create sophisticated graphics

With this program, complex graphics can be created on the Commodore 64 very easily. It has many advanced features, such as different paint brushes and the ability to draw circles, ellipses and rectangles. It is also possible to paint specific areas and to dump the screen to a printer.

WIN THE POOLS?

SPECTADRAW 3 – THE LATEST VERSION OF THE ORIGINAL AND BEST POOLS PREDICTION PROGRAM FOR THE 48K ZX SPECTRUM!!

AND NOW AMSTRA-DRAW – THE FIRST POOLS PREDICTION PROGRAM FOR THE AMAZING NEW AMSTRAD CPC 464!!

- Supplied with Database containing data on over 10,000 matches since 1980!
- You update the Database each week – but no tedious typing, as team and division names already in program!
- Errors easily corrected – the program even checks your entries!
- Comprehensive instruction manual and menu driven program – easy to use, even for a newcomer to computing!
- Will forecast the least likely draws for those who prefer to bet on fixed odds!
- Built in perm generator – complete your coupon direct from the screen!
- Fully microdrive compatible! (Spectadraw only).
- Compatible with Currah Microspeech – the first pools program to read you its predictions! (Spectadraw only).

Spectadraw 3 for the 48K Spectrum£9.95 inclusive
Amstra-Draw for the Amstrad CPC 464£9.95 inclusive
(Cheques/P.O.s payable to B. S. McALLEY)

We dispatch every Monday with the database made up to include all matches up to the date of dispatch.

SPECTADRAW (Dept PC), 1 Cowleaze, Chinnor, Oxford OX9 4TD.

BECOME A MASTER GAMES DESIGNER

How? Buy a P&M Software designer. No programming skill required. Unique Games utility high quality programs for 16K or 48K Spectrums. The technique: Using the P&M Creation technique redesign the layout of each game by simply picking up parts of the screen and dropping them somewhere else. Redesign all the levels of each game then save to tape for further use.

Our layout designers:

* Manic designer (48K): Redesign Manic Miner. Features rename cavern. Change robot, exit, willy, key positions. Change robot speed and add new features.

* Jet Set designer (48K): Redesign Jet Set Willy. Features rename room, cheat mode. Change map, conveyor belts etc., positions and more. Create three new rooms.

* Chuckie Egg designer: (48K)

Redesign Chuckie Egg and stop farmer Giles getting pecked.

* Horace designer (16K or 48K):

Amazing machine code program lets any Spectrum owner redesign Hungry Horace. Also available are graphics designers. Featuring music from the games, roll sprite, Enlarge, sprite smoothly around screen – much more. Excellent graphic designers.

* Our graphic designers:

Redesign all the graphics of Manic Miner.

* Jet Set designer 2 (48K):

Redesign all the graphics of Jet Set Willy. Includes cheat mode.

Send SAE for Competition details and illustrated details on our products.

Send your cheque or PO to:

**P&M SOFTWARE, 16 Bridge Road, Park Gate,
Near Southampton SO3 7AE
Tel: 04895 5722**

All products are only £2.99 each.

A masterpiece

Michael Griffin concludes Computer Art, a sophisticated graphics program

Computer Art allows you to create complicated pictures on screen using a simple single-key system of instructions and either a joystick or the cursor keys.

The first part of Computer Art's commands were published last week; the remainder follow.

Select joystick/cursor key cross control.

Accessed by pressing the Tab key. The control is switched between the two and the function is accompanied by a warning beep.

Draw arc. Accessed by pressing the Ctrl key. This is identical to *Ellipse* except only an arc is drawn.

Set Point2. Accessed by pressing the Return key. This sets the value of a point called Point2 to be the same as the current cross position.

Erase. Accessed by pressing the Delete key. This wipes out a triangular area to the current background colour (black).

The vertices (corners) of this triangle are the current cross position, Point and Point2.

Light dotted area fill. Accessed by pressing the '1' key. This fills an area enclosed by a perimeter with spaced dots — the fill routine is non-recursive, but if it escapes the routine can be aborted by pressing the Escape key.

Striped area fill. Accessed by pressing the '2' key. Same as above except it fills an area with stripes.

Heavy dotted area fill. Accessed by pressing the '3' key. Same as above except it fills an area with a checker-board fill.

Solid area fill. Accessed by pressing the '4' key. Same as above except it fills an area with solid black.

Reference grid. Accessed by pressing the '6' key. Plots a fine grid of dots on the screen to assist with accurate scale drawing.

Remove grid. Accessed by pressing the T

key. Removes the reference grid. Display screen co-ordinates. Accessed by pressing the Shift key. This displays the present screen co-ordinates of Point (as V and W) and the present screen co-ordinates of the cross (as X and Y).

Escape fill or print-out. Accessed by pressing the Escape key. Aborts fill routine or printer dump.

Load screen image; Save screen image; Dump screen to printer; Clear screen and Key summary. All accessed by pressing Copy key and then pressing the appropriate number of the options displayed. Any other key returns to normal operation.

The program *Loads* and *Saves* screen images as the name 'Picture'. It will automatically overwrite old images and any other programs of the same name. It is therefore wise to check beforehand for any possible name clashes before use, and any images you wish to keep must be 'Renamed' for their own protection.

Note: For some strange reason my printer has put £ signs instead of # signs between lines 1640 and 1970. Wherever the £ sign is printed it should be replaced with a #.

CURRAH μ SPEECH

Speech Synthesiser for ZX Spectrum

The **CURRAH μ SPEECH** is ready to talk immediately on power-up, has an infinite vocabulary and outputs speech and ZX Spectrum sound through your TV speaker. There is no software to load with **μ SPEECH** — sophisticated Gate Array technology means you can just plug in and start constructing words and sentences like this:

LET SS = "sp(ee)k (nn)(oo) (ee)vll" will say "speak no evil"! Further commands control the "voicing" of keys as they are pressed, and an intonation facility allows you to add expression to the speech.

μ SPEECH is fully compatible with ZX Interface 1 and may be used with the **CURRAH μ SLOT** Expandable Motherboard, allowing easy expansion of your ZX system. **μ SPEECH** and **μ SLOT** will also be compatible with the **CURRAH μ SOURCE** unit when it arrives later this year, allowing you to write **Assembler** and **FORTH** statements directly into your **BASIC** programs!

Top selling games like **ULTIMATE'S Lunar Jetman** feature **μ SPEECH** voice output — watch out for other titles from Bug-Byte, CDS, Ocean, Quicksilver and PSS.

μ SPEECH is available from COMET, W.H. SMITH, WOOLWORTHS, GREENS, BOOTS, JOHN MENZIES, SPECTRUM STORES and good dealers nationwide — or use the form to order the **CURRAH μ SPEECH** — winner of the CTA 'Product of the Year' award 1984.

CURRAH

To: MicroSpeech Offer, P.O. Box 1, Gateshead, Tyne & Wear, NE8 1AJ

Please Supply ☐ MicroSpeech unit(s) at £29.95 each incl. VAT & P & P

☐ MicroSlot unit(s) at £14.95 each incl. VAT & P & P

TURBO CHARGE YOUR SPECTRUM

Outperforms any Spectrum interface

The unique Turbo interface from Ram gives you all these features – and more – in one unit:

- * A variety of interfaces including: Rom cartridges, two 9-way D plugs for standard joysticks, PLUS full expansion bus at rear.
- * Compatible with Kempston and Protek protocols.
- * Works with latest Quickshot Mk II auto rapid-fire joysticks!
- * Choice of Rom cartridge or tape cassette software.
- * Instant program loading with cartridge software.
- * Built-in power safety device – unique to Ram Turbo.
- * Full one year guarantee.
- * Immediate availability – 24 Hr despatch on receipt of P.O./credit card details (cheques – seven days).
- * Incredible value – only £22.95.

So don't wait around – simply complete the coupon and send it to us today.

Or call our credit card hot line on 02514 25252. (Access and Visa welcome).

Ram Electronics (Fleet) Ltd, 106 Fleet Road, Fleet, Hampshire GU13 8PA.

Please send me:

_____ Spectrum Turbo Interface(s) at £22.95
+ £1 p+p (overseas orders £3 p+p)

_____ Quickshot II Joystick(s) at £9.95

(Only when purchased with Turbo – normally £12.95 + £1 p+p)

I enclose cheque/postal order or charge my Access/Visa for: £ _____

Now AVAILABLE for any SPECTRUM THE INTELLIGENT PRINTER INTERFACE

from

Features:

- Compatible with **ALL** Centronics Printers and Plotters.
- Recognises **LLIST** and **LPRINT**.
- Recognises copy to produce screen dumps on any graphics printer — in up to six sizes and three styles, including grey scale, shading and colour (subject to printer capability).
- Down loadable user definable character set to allow widest possible range of print styles.
- Software is in **ROM**, so does not need to be loaded from tape every time the interface is used. The special software allows the interface to recognise the functions of the printer in use and allows the style of printing or copying to be easily altered.
- Changing from one printer to another is readily accomplished by a quick and easy-to-use menu programme.
- All inclusive price of **£45.00**

**AVAILABLE NOW BY MAIL-ORDER OR FROM YOUR
LOCAL STOCKIST.**

Sound advice

Colin O'Neill explores the possibilities of sound on the new Amstrad CPC 464 micro

The program is a utility which enables the user to explore the complex sound possibilities of the Amstrad. The program is designed to be used in conjunction with the manual, and the variable names used in chapter 6 of the manual have been used as far as possible.

However, as the volume envelope parameters are so extensive, the numeric keypad keys 1-9 have been used. The top row

controls the first three parameters, the second row the following three, and the third row the third set. The two remaining volume envelope sections are unused, but could easily be added if required. Please note that use of the volume envelope will automatically change the duration of the note.

The envelope controls have been kept as simple as possible; entry of the first section

of the envelope will automatically set the second as a reverse of the first, the final three sections are unused but could be added if required.

To change the parameters, hold down the required key and the up or down arrow key to increase or decrease the values. The note will sound during this procedure so the effect of the change can be monitored. The values of the parameters will be displayed on the screen simultaneously; these can be written down when an interesting sound is generated for subsequent use in other programs.

The program makes use of some of the interesting features of Amstrad's Basic, such as windows and While/Wend loops.

Be the master of 49,152 pixels.

Get all your pixels on your Spectrum completely under your control. Dominate their existence. Mastermind their every move. And do it all in machine code, so they move fast to produce exactly the amazing displays you really want.

Here's a great new book from the Sunshine people, all about machine code sprites and graphics on the Spectrum.

Read it, understand it, and then start to move those pixels. And remember, with this new book you'll discover the secret of the shrinking window!

Look out for the Sunshine range in W.H. Smith's, Boots, John Menzies, other leading retail chains and all good bookshops. Dealer enquiries: 01-437 4343.

SPECTRUM & BBC POOLS PREDICTOR

WITH 11,000 MATCH DATABASE

Now in its 3rd successful season, Mayday Software's Pools Predictor has been made even more powerful with a new and unique 11,000 match database. SEVEN separate forecasting techniques have been combined to give you the best forecasts yet. And just as easy to use is our new racing analyser. This uses the racecard from your daily paper to analyse any horse race — and it's yours at no extra charge!

Spectrum 48K Historical Wargaming

AUSTERLITZ £9.50

This game is a re-creation of Napoleon's famous victory at Austerlitz. 'You are Napoleon'.

The computer provides a highly sophisticated opponent with 90% of the program written in machine code.

All the mechanics of wargaming, such as movement, combat, terrain effects, reports etc., are taken care of by the computer. The game is for one player only with 3 levels of difficulty and is played on a physical map of the battlefield.

PACIFIC WAR £6.00
MIDWAY £5.25

Relight the aircraft carrier battles of World War 2. The player controls the American forces, your computer the Japanese. Full screen display of task forces and aircraft movement. Includes airsearches, airstrikes, fighter defence of ones own carriers and allows the player to control the detailed activities of each aircraft carrier from within its own status display.

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed.

3-D Graphics

on Spectrum

This program demonstrates very well the powerful Draw command. Normally it just draws a line between the current position

and the two parameters specified, however if you add a third parameter you can specify the degree of curvature of the line.

The program asks you to input the X,Y coordinates of the centre of the sphere, and then the radius, (make sure it will fit on the screen.) The resolution is a measure of the

number of steps when drawing the sphere, 4 gives a fairly low resolution whilst 16 or 32 give a nice high resolution effect.

Program notes

Line 30 Set up screen colour (chosen to shimmer at the moment)

Line 30-60 Input data as described above

Line 1000- Actual routine, may be compacted down to 1 line if to be used in another program

Variables

Microradio

GW6JJN

User groups

This week Microradio turns the spotlight on the two radio computing users groups, the Sinclair Amateur Radio Users Group (SARUG) and the user group for people with non-Sinclair computers, RAMTOP.

Both amateur radio and CB are hobbies in their own right and both pastimes have many thousands of followers. Amateur radio for example has been in existence for as long as radio transmissions have been possible. Although it is a technical hobby, the majority of

amateurs are non-technical and find radio a welcome change to their normal occupations.

As technology advanced and became inherently more complex, many found it difficult to begin to understand what happened inside the black box of transceivers available today. This is a pity because the tradition of amateur radio is involvement in the technology at whatever level, hopefully even the building of equipment. Microelectronics seemed to have put an end to that involvement for many people. Then something wonderful happened — the home computer.

The micro made it possible for amateurs to transmit data, TV, Morse, RTTY and many other things, and more exciting still, led to involvement and programming. Simple interfaces are possible and the sense of real achievement was returned.

Radio computing as a hobby is with us in a big way as the response to Microradio has shown and to cope with this hobby, user groups were formed. The first is the Sinclair group, SARUG of 3 Red House Lane, Leiston, Suffolk. (Please send an SAE if contacting User Groups.)

Behind SARUG is Paul Newman, G4INP. Paul publishes an excellent newsletter containing projects and programs every couple of months and it is something I wouldn't miss.

Paul is an extremely competent programmer who often assists group members with difficulties as well as publishing his programs along with members with difficulties as well as publishing his programs along with members contributions in the newsletter.

At the moment I am building an interface for RTTY which was published in the SARUG newsheet. Members of SARUG

hail from all over the world so the input is terrific. If you have a Sinclair computer and an interest in communicating then get in touch with SARUG.

RAMTOP, the group for non Sinclair machines, is at Great Billing Rectory, Great Billing, Northampton. Run by the Rev. Richard Butcher, RAMTOP is younger than SARUG and has also a fine newsletter including projects and programs. In the latest RAMTOP newsletter is news of a Beeb Packet Radio System, so hurry.

Please mention *Microradio* if you contact User Group and please, don't forget the SAE.

Ray Berry GW6JJN

This series of articles is designed for radio and microcomputer enthusiasts alike. If you have any queries that you want answered, hints and tips to share, or topics that you would like to see covered, write to: Ray Berry, *Microradio*, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

Moles

on Vic20

This program is also written for the unexpanded Vic20 or Commodore 64 but again it could be easily adapted for any other

machine. It calculates the number of moles in any given quantity of a substance — a technique frequently used in chemistry.

Program notes

1-60 Introduction
70-160 Input state of substance.
1000-1510 Calculates moles if the substance is a gas.
2000-2030 If substance is in solution.

3000-3030 If substance is a solid or a liquid.

Variables:

T Delay loop.
AS Input choices.
V Volume.
M Molarity.
RMM-relative molecular mass.
MA Mass.

Arcade Avenue

Japan success

To start off this week I have a few more *Sabre Wulf* scores to put into the Hall of Fame. J. Dodd and his or her brother of Halesowen have completed the game, but are keeping their score secret for now — they advise that it is vital to make a map, as does Mr N.C. Barker of Weston Super Mare who has a high score of 91445 in only 63% of the maze. He has also finished *Atic Atac* with a score of 99% (remember I am also keen to hear of low percentages for these games).

Colin Graig of Kirkcaldyn has completed *Wulf* with 117640 and 83% "after seven

hours of intense concentration at 6.45 on Tuesday June 26th."

Now on to pastures new — Richard Couchman of Huntingdon has sent in some marvelously original pokes for the *Horace* series of games. With *Horace goes Skiing*, *Poke 30027.0* *Poke 30644.0* ensures that there is no ski charge. *Poke 2009.0* and *Poke 29045.0* removes the cars from the frogger stage and *Poke 30762.0* means that there is no ambulance fee.

Pokeing 27680.0 on *Horace* and the *Spiders* gives only one life (for masochists maybe? Perhaps some different numbers would be better) and *Poke 24960.0* and *25142.0* allows you to skip the first stage which suits me as I find it a boring impediment to the main game. Richard also offers the technical tip that he gets a better *Save* using the Ear socket of his Spectrum.

R Blake of Rayleigh in Essex, my old stamping ground, sent in some comments about the

best of the new Sinclair games. Concerning *Match Point* it is easy to miss the graphics of the trophy as you must give a key press to view the screen and another press to continue, unless you give a light, quick tap the computer reads it as two key presses and moves straight on.

On to *Stop The Express*: "Talk about addictive — the day I bought the game I spent eight hours before finally managing to stop the train! Could the fact that it was written in Japan explain the message "Congratulations! You Succeeded!" which accompanies the graphics of the train's engine?"

Well, I had always given them the benefit of the doubt and assumed the wacky spelling to be deliberate (unless no one at Sinclair could finish the game to check it) but I must agree it is one of the best for the Spectrum. Although not really technically breathtaking, it has been so well designed that it could almost pass as a true

arcade game.

Finally, there can be few Commodore programmers regarded with more respect than Jeff Minter, yet the reception of his games when converted to the Spectrum has been very iffy. Somehow they lose their legendary awesomeness in transit. In part this is due to the weedy Spectrum sound, but it is also due to the fact that conversions to date have been old Vic20 games which look poor against the likes of Ultimate. The good news is that we can soon expect a conversion of the more ambitious and wonderful CBM 64 game *Hoverver Boverver*. Tony Kendle

The Arcade Corner is a new section for anyone who enjoys playing arcade games. If you have any comments, from playing tips on difficult games or programs you'd particularly like to praise (or blame!) then write to: Tony Kendle, Arcade Avenue, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

ATTENTION! ATTENTION! ALL VIC & CBM USERS!

Do you use tapes? Are you sick and tired of waiting for your programs to be Loaded/Saved from on the tape? Then you need a **TORNADO!!** Tornado allows you to Save/Load/Verify your Basic/machine code programs faster than a CBM 1541 disk drive does!! Due to popular demand! Tornado now comes with new and more powerful commands plus extra instructions to assist you in making fast versions of your existing machine code/Basic programs. Tornado is available on tape for CBM 64 and 8K + Vic 20.

Do your Run/Stop and Restore keys often fail? Do you want to come out of those crashes?! Or come out of those unbreakable loops?! Then what are you waiting for, get yourself a **BREAKER!!** Reset switch and let your computer know who is the boss!! Breaker can be connected to your machine in seconds. Connecting directly to the serial port of the CBM/Vic20/1540-1 MPS 801 etc. included with the Breaker reset switch is a basic recovery program. Breaker is now available for any CBM 64 or Vic 20.

Available for CBM 64 and the Vic 20 now is the NEW EDITION! Now combining Vic 20 & CBM 64 **ROM-FILE**. Containing a complete disassembly of CBM 64 & Vic 20 Basic & Kernal Rom with comments! As well as a complete description of all 6502/6510 instructions and addressing modes + a complete listing of a machine code monitor.

Please make cheques/PO payable to:

Use your intelligence to write a game that's more clever than you.

If you've a Commodore 64, a nodding acquaintance with BASIC, and a love for real games of strategy, here's the book for you.

John White's latest book, called *Writing Strategy Games* contains all the techniques for intelligent games creation. Starting with the all-important theory, both behind the games and the programming, this new book also details the practicalities involved.

You'll discover how to set up a 'board', move pieces, how to develop standard openings and a variety of endgame moves. If you want to write a Grandmaster-beating chess program, or a four-dimensional game of draughts, then buy this book. Order today from your local bookshop, computer dealer, or by post direct from Sunshine, using the order form.

Please send me *Writing Strategy Games* on the Commodore 64 at £6.95 plus 50p p&p. I enclose a cheque/postal order for £ payable to Sunshine Books.

Pacman's Revenge

on BBC

Pacman's Revenge, is a delightfully (I hope) simple game. All you have to do is catch

Super Ghost III, (the one with a big bite) who is lurking underneath you. (In case you might not know who you are, you are the 'C' shaped character.)

This program consists of two parts; the

loader program, and the game itself. It was designed for the BBC B but will also run on the Acorn Electron if the *Mode 7* commands are changed to something suitable. It is a pretty good program for its size.

Tony Bridge's Adventure Corner

Alien teeth

The Vic20 lives on. Despite the new machines arriving on the market, one of the oldest still has its devotees; one of which is Brenda Beresford of Tilehurst, Berkshire.

"My Vic20 is in need of your help — no, not with Scott Adams (I've solved all five and great they were). I'm stuck in *Arrow Of Death Part 1*. In fact, everybody I've spoken to is having the same problem — how do you enter the Giant's building and live to carry on? *Nosferatu* from Terminal Software is also a problem — where is the key to the shed? I rate Scott Adams 10/10. *Rescue from the Castle Dread* (Terminal again) 10/10 (although there is no congratulatory message). *Magic Mirror* is also good. *The Colonel's House* is quite easy. *Curse of the Werewolf* is a pain from beginning to end, I hate random adventures. *Trader*, not hard but I enjoy the colour and very good graphics — shows what the Vic can do. About to tackle *The Golden Baton*."

And from Mr L J Wilson of Newcastle: "I've been stumped for over eight months in *Golden Baton* for my Vic20. How do I take the quartz from the magic room — typing *Help* reveals that "I need Magic", but I can't work out what this means. Wearing the helmet and waving the staff doesn't help. Any ideas? Incidentally, I noticed that Nick Walkland, in the Corner of 12-18 April had completed it, and I hope that, between you, you can give me some help. My adventuring to date: *Adventureland* — a good solid

adventure. *Golden Baton*, see above. *Arrow of Death Part 1* — stuck in the same place as Nick Walkland. *Into the Labyrinth* — can't get past the Hydra to get at Ankh (there are some nice touches in this adventure). *The Colonel's House* — a pleasant change from "heroic" adventures, but not difficult."

So, Brenda and Mr Wilson are having trouble with the same adventures, and are in agreement with others. Nick Walkland, mentioned last in that corner of 12-18 April, was stuck in *Arrow of Death*, but I have since heard from him that he has finished the adventure. So, Nick, let us all know the answer to this problem. In the meantime, he has also finished *The Golden Baton*, *Perseus and Andromeda*, *Wizard of Akryz*, the Level 9 adventures, *The Hobbit*, *Mountains of Ket* and *Temple of Vran*, *Urban Upstart* — quite a list there, which includes some of the real toughies. If you're stuck in these, Nick will gladly answer your queries — write to him at 84 Kendal Road, Hillsborough, Sheffield, Yorkshire, including an SAE.

Staying with the Vic20, Gwynne and Ian Harper (of 97 Vivian Road, Sketty, Swansea West Glamorgan SA2 0YN) have some more questions about adventures that they are playing on their Vic — but first, a critical list of adventures they have completed: "*Wizard and the Princess*" (unexpanded, Melbourne House): 4/10 — not really an adventure, and it shows. Reasonable graphics, and a good 3D maze, but otherwise poor. *The Dungeons* (16K, Anirog): 4/10 — again, good graphics, but you merely wander about a maze killing randomly-placed monsters. If you reach the finish before you die of boredom, then you are greeted with the prompt "Congratulations — now load *The Dark Dungeons*." There's nothing else on the tape, but an Anirog advert shows that *The Dark Dungeons* is now sold separately. *Alien* (8K, Mac): 7/10: This is more like it, although it is not a true adventure. True to the film, though — graphics are good, and careful strategy is needed to avoid being caught by the alien in a dead end. Your death, at the teeth of the alien, is entertaining. The instructions (all 8K of them!) are an experience in themselves.

Zok's Kingdom (16K, Anirog) 7/10: This one needs lateral thinking and fast reactions — the graphics are neat and well done.

Quest of Merravid (19K, Martech) 4/10: took us 45 minutes to do! It creates a nice

atmosphere occasionally, but this doesn't make up for the lack of any real puzzles. *Into the Labyrinth* (16K, Abacus) 7/10: Many puzzles, quite hard unless you think logically. We didn't like the *Help* command — they weren't cryptic clues as befit an adventure, but, rather, step-by-step instructions. *Rescue from Castle Dread* (16K, Terminal) 8/10: An excellent adventure. It has an extensive map when completed, and it took the creative talents of both my brother and I to finish it. Marilyn Boyce (The Corner, 31 May) should take the talisman with her in the balloon, as it is used to bribe the demon (you can only carry one thing in the balloon, or you'll lose sight and crash!). To get past the warrior (same issue, G Shaw) is a long-winded affair. [I suggest you try writing to the Messrs Harper — see their address above].

"*The Pyramid* (8K, Mogul) 8/10: Considering that it is for the smaller memory, very good indeed. Some of the locations are very difficult, and there are several odd inhabitants, like an aardvark (they like Ants!) and a mummy (any D&D fan knows that you have to burn them). Also, put objects in your knapsack, you can then carry up to nine.

Fitchhiker's Guide to the Galaxy (16K, Supersoft) 9/10: Superb! This was written for the Pet, but we converted it to run on our Vic20, so I suppose it counts. This was our first adventure, and to my mind nothing else comes close.

"Of the Scott Adams', we've completed *Pirate Cove* (the most fun), *Mission Impossible* (the easiest) and *The Count* (the hardest). We are now in the process of doing *Four Gates to Freedom* and can supply the loader code as well as various clues.

"Now, are there any versions of the Classic Adventure for the Vic? If *Pimania* fits on a 16K ZX81, why not a Vic? What about Brian Howarth's adventures?"

Thanks for a very interesting letter, Harpers. I hope you don't mind your address being broadcast! If anyone wishes to write — please include a SAE.

To answer those last questions — no, I don't think there is a version of Classic Adventure available for the Vic; is *Pimania* actually available for the ZX81? Anyway, Automatia seems only to be interested in Sinclair machines (with the occasional foray into Dragonland); Howarth's *Mysterious Adventures* are, I'm afraid, not available for the Vic.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair — help is at hand.

Fill in the coupon, explaining your problem,

send it to us, and a fellow adventurer may be able to help.

Remember — the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

STRONG COMPUTER SYSTEMS

Bryn Cottage, Peniel, Carmarthen, Dyfed
Telephone: 0267 231246 for full price list & specs.

Just released from Sunshine is the latest book from the highly acclaimed QL Classics series - and it's called *Quill, Easel, Archive & Abacus on the Sinclair QL*. All these packages, which are included with every QL sold, are recognised as powerful in their own right, but when working together with one another, they become highly effective problem-solving tools for business.

Alison McCallum-Varey's book introduces you to all the four packages, but, most importantly, shows you exactly how to run them as a complete system.

This book, essential for every QL Owner, will expand the day-to-day use of your QL, letting you run Quill and Archive in tandem for instance, and then outputting the results for graphic interpretation by the Easel package.

If you've Quill, Easel, Archive and Abacus on your Sinclair QL, then you need *Quill, Easel, Archive and Abacus on the Sinclair QL*.

Please send me Quill, Easel, Archive & Abacus on the Sinclair QL at £9.95 plus 50p p&g. I enclose a cheque/postal order for £.

SYSTEM 15000

THE REAL TIME GAME

BEAT
IT !!

SYSTEM 15000 The different game with the **NEW "TOTAL REALISM"** concept developed by **AVS** sets you firmly in the middle of an International conspiracy where you have to use your computer together with **SYSTEM 15000** to recover **\$1,500,000**. The game is a 'real time' investigation that realistically captures the excitement of accessing computers by telephone and breaking their codes to obtain vital information.

COURSEWINNER

The Punters Computer Program

COURSEWINNER allows you to use the power of your computer to get the edge on the bookmaker.

● COURSEWINNER contains a database full of detailed information on all English and Scottish flat courses. The ten leading jockeys and trainers, and effect of the draw is detailed for each course.

This information can be displayed on the screen at any time.

● The program analyses these factors combined with the results of the last three outings, starting price and weight carried.

● COURSEWINNER is simple and quick to use, yet very powerful.

● Boxed with detailed instruction booklet.

Price £12.50 all inclusive IMMEDIATE DISPATCH (RETURN OF POST)

Available for:

SPECTRUM (48K), BBC (B), COMMODORE 64, DRAGON, APPLE II/IIe, ATARI (48K).

POOLSWINNER

The Ultimate Pools Prediction Program

● POOLSWINNER is the most sophisticated pools prediction aid ever produced. It comes complete with its own massive database.

● Can be used for Scoredraws, Draws, Aways and Homes.

● The database contains over 20000 matches (10 years league football). It updates automatically as results come in.

● The precise prediction formula can be set by the user. This allows development of your own unique method.

● Package is complete with program, database and detailed instruction booklet.

Price £15.00 all inclusive IMMEDIATE DISPATCH (RETURN OF POST)

Available for: SPECTRUM (48K), ZX81 (16K), BBC (B), COMMODORE 64, DRAGON, APPLE II/IIe, ATARI (48K).

Available from dealers or direct (return of post) from:

37 Councillor Lane, Cheadle, Cheshire. Phone: 061-428 7425

AN IMPORTANT ADVANCE IN DATA DUPLICATION

Added security against pirates

Power Load is a software controlled system that makes copying extremely difficult, either by audio or bit copying, or by code breaking. Moreover, conversion routines are **altered regularly**, so no permanent deciphering system can be successful.

Very fast loading

Loading time on the Commodore C64 is over three times faster than a normal cassette; Sinclair Spectrum is over twice as fast.

cost saving. Available for C64; Spectrum. (BBC and Electron under development).

Reduces costs

Using Power Load, a Commodore C64 cassette can be reduced from C30 length to C10 – a substantial

File creation

Glen Pearsons of Redditch Worcs, writes:

Q I own a Vic20 and recently have transferred all my names, addresses and telephone numbers on to computer tape. The program I used for this is the example in the manual, suitably amended.

My question is, how do you create a file which you can write to at any time? By this, I mean write to it without having to type in all the information that was previously stored on the tape?

A As you have discovered, cassette tape is not a suitable medium for the handling of filed data. In order to update your file it will be necessary for you to read it in to your program first, make the necessary insertions, amendments or deletions, and then write the whole thing back to cassette. Normally a different cassette is used, so that if a tape error occurs you don't actually lose everything.

Statement lost

T M Birkett, Blackpool, writes:

Q I require help on two recent games published in your magazine. In *Gone Fishing* (vol 3 No 22), after entering the first three lines and RUN, I get the error 'Statement Lost' every time.

In *Cobra* (vol 3 No 24) after entering the four lines in program 1 and Running, I am unable to input the data in a way the computer will accept. Can you help?

A REM statement in line 1 (of *Gone Fishing*) must be typed in exactly as it appears in the listing, or at least contain 25 or more characters. This is because the machine code statements (in the DATA statement on line 3) are Poked into the REM. If the REM statement has less than 25 characters in it, when line 2 is executed it is corrupted by the *Poke* it contains.

In *Cobra*, the instructions given are not very clear. What you should do is type in program 1 (four lines), Run it, and each time you are prompted for 'data' enter the next number in the list above. Eg, the first 10 numbers you should type in are: 60 60 60 60 60 60 60 33 33 (first 8 from line A =, last two from line B =).

You will have to continue entering the data in this way, one number at a time, until the program stops prompting. You should then Save your graphic characters, by SAVE "udg" CODE USR "A", 168. You can then type in the main program (without Newing) and run by using GOTO 8988.

Copy onto cartridge

R M Jones of Yelverton, Devon, writes:

Q I feel, in common with others an urgent need for Microdrive versions of Spectrum machine code programs. Is it not possible for us to be given the necessary instructions to copy on to cartridge ourselves; I want to load *Vu-File* on to Microdrive.

I require to file statistics on staff daily for a month, and need to use an array of x(31,25,12). This statement is promptly thrown out on the grounds of insufficient memory. How can this be overcome?

A I agree with you that means should be provided to enable Spectrum owners who have microdrives to put all their software onto microdrive cartridges. Unfortunately, these facilities are not being made available. Also, a lot of Spectrum software (*Vu-*

File included) is incompatible with microdrives because of the memory locations they use. Short of rewriting these programs there is nothing you can do.

It is difficult to make constructive suggestions regarding your array problem, as I don't know what the subscripting represents. One possibility that comes to mind is that you file your statistics on a daily, rather than monthly basis. (I guess that is the significance of the subscript 31).

If you think of it, an array of the size you require would occupy 93,000 bytes. The equivalent array in character form would only take 9,300 bytes (Spectrum numbers are stored in floating point form). If you, therefore, stored your data in character form and converted it to numeric form when you wanted to use it (using *Vals*), you might be able to squeeze your program in.

Saving to tape

B C Warltier of Christchurch, Dorset, writes:

Q I have a CBM 64 computer and have been experimenting via a Data statement. I can remove all the Basic statements, leaving just the machine code in memory, but I cannot find any means of saving the machine code to tape. Can you advise me please?

My second question concerns the use of memory limitation to protect user defined graphics from being overwritten. Many writers use *Poke 52,48:Poke 56, 48* which immediately sets the upper limit of memory available to Basic to 12288. Why should this very high amount of memory be lost to me?

A A fairly simple way to save machine code programs on the CBM is to use the

following direct commands:

```
PRINT (start address/256 - INT (start
address/256))*256
PRINT (INT(start address/256))
PRINT (end address/256 - INT (end
address/256))*256
PRINT (INT(end address/256))
```

We can now enter:

```
POKE 43,v1: POKE 44,v2: POKE 45,v3:
POKE 46,v4:
SAVE "program name", 1,1
```

The values for v1,v2,v3 and v4 are obtained from the four print statements.

The reason that location 12288 decimal is normally used as the start address for UDG's is due to the fact that the Vic chip can only access 16K at any one time (of memory that is). Thus, if you located your UDG's higher up in memory, you would have problems in accessing them.

Pixel by pixel

Howard Jones of Bracknell, Berkshire, writes:

Q I am writing to ask if you know of a sideways scroll routine which scrolls the bottom two thirds of the screen pixel by pixel. I am only just starting in machine code so I could not write such a routine myself. Also, can you recommend a book for arcade game programming which covers sound, graphics, special effects, etc?

A Unfortunately, you have forgotten to tell me which machine you have, so all I can do is list a few books which cover the subjects you mention.

Supercharge Your Spectrum, published by Melbourne House. *Advanced Graphics with the BBC Microcomputer*, published by MacMillan. *Commodore 64 Sound and Graphics*, published by Melbourne House, and *Sprites and Sound on the Commodore 64*, published by Duckworth.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek it* to Phil Rogers and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke*, PCW, 12-13 Little Newport Street, London WC2R 3LD

ADVENTURE HELPLINE

Snowball on Commodore 64. How do I get through the Security Door? Howard Seymour, 37 Waterford Green, Welwyn Garden City, Herts.

Hobbit on Commodore 64. Cannot get past the black river. Cannot get into the Goblins Caves.

Quest on Spectrum. Cannot get out of the forest or feed Dragon. Allan Churn, 43 Stafford Street, Derby DE1 1JL.

Aztec Tomb on Commodore 64. How do I climb the cliffs or get to the land from the boat? Christopher Stamp, 22 Fir Rigg Drive, Marske, Redcar, Cleveland TS11 6BT.

The Count on Vic 20. How do you get the matches or the torch to go down the passage, and how do you tell the waiter to lower the oven? Shaun Calladine, 39 Grammer St, Denby Village, Derbyshire DE5 8PQ.

Pharaoh's Tomb on Vic 20. How do you get across the moat? Andrew Tate, 85 Argyle Way, Dunblane, Perthshire FK15 9DY.

Inca Curse on Spectrum. Which objects do I need to get through the porthole? How do I get through the slightly open panels? Chris Kissack, 30 High View Road, Douglas, Isle of Man.

Castle Colditz on Spectrum. Have collected torch, rope, pencil, chisel, lifebelt. Cannot light torch, open locked door, nor get out of barred window. Mrs R M Batham, The Whisperings, Sandhills Lane, Virginia Water, Surrey.

Golden Voyage on TI 99/4A. How do you lose the Stone Goddess and how do you get off the staircase? Ben Thurley, 55 Beech Avenue, Bourne, Lincs.

Voodoo Castle on Vic 20. How do you get the Ju-Ju Bag and how do you remove the wooden boards up the chimney. Ian Murray, 18 Sakombe Drive, Hunts Cross, Liverpool.

Valhalla on Spectrum. I cannot find the second object, (Drapir). Lee Graves, 114 Shakespeare Ave, Hayes, Middx UB4 0BW.

Hobbit on Spectrum. Can get treasure, but cannot get past the pale bulbous eyes. N. Goulding, 13 Repe Lea Estate, Droitwich, Ware.

Adventureland on Vic 20. How do you get past the bear and keep the honey? Miss K White, 44 Tenterden St, Bury, Lancs BL9 0HQ.

Nosferatu on Vic 20. Money for bus behind locked door. Where is the key? F Taylor, 53 Northumberland Cres, Southend-on-Sea, Essex.

Espionage Island on ZX 81. How to take boat downstream; what to do when native woman is reached. Tony Coxon, Bestwood Park Estate, Nottingham.

Voodoo Castle on Vic 20. Can't open safe, or get through crack. Also cannot understand when medium says B96. Stephen Gardiner, 14 Courtfleet Drive, Erith, Kent.

Urban Upstart on Spectrum. Can't get out of jail and avoid police. Kevin Finn, Bridge House, The Grove, Barnby Dun, Dorchester.

Hobbit on Spectrum. Having arrived in clearing with the ring and Thorin, how do I get through the Magic Door ... if indeed I have to! Neville Wright, 10 Deane Road, Edgehill, Liverpool.

Pimania on BBC B. Getting past the Ultimate Gate of PI in the Ivory Caverns. Robin Williams, 9 Morden Rd, Blackheath, London SE3.

Hobbit on Spectrum. How do you get out of the Goblins' Dungeon; also, how to get into the barrel after you get out of the Elves' Dungeon? Nadeem Zafar, 63 District Rd, Sudbury Town, Wembley, Middx HA0 2LF.

Hobbit on Spectrum. How do you get through the Magic Door when you are in the Elves' Dungeon and have 3 keys? Matthew Hodges, 39 Birthfield Rd, Kidderminster, Worcs.

Nosferatu on Vic 20. How do you get into the hut on the lawn? Miss K White, 44 Tenterden St, Bury, Lancs.

Espionage Island on Spectrum. Gone round in circles, unable to go downstream, unable to use boat. Nicholas & Andrew Bartlett, 17 Abbey Close, Crapstone, Yelverton, Devon PL20 7PX.

Ship of Doom on ZX Spectrum. I can get the key from the case, but cannot open the Computer Room door with it. Mark Stokes, 3 Theodore Gdns, Scunthorpe, S Humberside.

Circus on Spectrum. Is the snorkel there for a reason? If so, what do you do with it? Liz Stafford, 24 Bridgewater Drive, Chester CH3 5LS.

Time Machine on Spectrum. At the Sphinx — pull lever — then what? Liz Stafford, 24 Bridgewater Drive, Chester CH3 5LS.

Inca Curse on Spectrum. How do I get down the port hole, and what do I need to do so? Jeff Rogers, 53 Bridusland Rd, Tile Cross, B33 0BJ.

Valhalla on Spectrum. When you have got the key, and open the chest and cupboard, what is the keyword to look inside? John Griffiths, 7 Redruth Ave, Wigston, Leicester.

Smugglers Cove on Spectrum. Can't get started, no matter what I try. Martin Kane, 56 Rosemount Cres, Carstairs Village, Lanarkshire, Scotland ML11 8QD.

Inca Curse on Spectrum. I cannot get past the fire and find any treasure. Martin Harris, 151 Dawlish Drive, Seven Kings, Ilford, Essex.

LUNACY

Programming your Commodore 64 is a classic example of a book that has, in this country, no reason for its existence whatsoever.

The book has been imported from the USA and so consequently costs £12.55 rather than about £8.95. Whilst some American computer books have a definite edge in terms of, for example, originality, style (well sometimes) and accuracy, they also have disadvantages in terms of the difference between the two markets.

For example the book suggests that you might want to buy the Commodore cassette unit since some games come on tape (really?). It goes on to suggest that if you can't use a disc drive because you can't afford it, you might like to 'by-pass it in favour of a printer' — this lunacy!

Other than that and similar stuff, it's pretty much your usual intro guide full of tables, programs and flow charts.

As I say, there is no reason to buy it whatsoever.

OVERVIEW

As Christmas draws near, books tend to get bigger, more colourful and of course, more expensive.

Not only that but they get less and less machine-specific and more and more intended for a general, coffee table, market.

One reason is that a lot of aunts and uncles are going to want something to buy for Christmas presents.

Choosing and Using Your Home Computer is a big colourful book intended for people who know nothing about computers but who think they should find out something. It is easy to digest and very 'lick throughable'.

What you get, is an overview of the main computers which is reasonably up to date (includes QL), sections on various kinds of computer game, modems, graphics, binary, discs, printers etc etc etc. All well illustrated with diagrams, photos, etc.

If you don't expect it to teach you anything very specific about your computer but just want general overview, it could be worth looking at.

This Week is a new section that covers all the new software coming on to the home micro market each week. All suppliers should send details of their new programs to: This Week, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

Tape office

What the Mini is to the Rolls Royce, *Mini Office* is to integrate business software like Lotus 1-2-3.

Mini Office for the standard 32K micro includes a database, wordprocessor, spreadsheet and simple graph program all on one tape. More than that, information can be moved from one program to the other so that, for example, information from the spreadsheet may be fed to the graph program.

The wordprocessor will count words, let you correct text with a cursor and produce double-sized letter and print out the end result. The database lets you set up simple files, of both text and numbers and add, list and examine records. You can replace strings, search fields and sort records into alphabetical or numerical order. The spreadsheet works exactly as a normal spreadsheet manipulating figures according to given mathematical rules. Finally the graph program draws simple bar graphs based on the figures.

Obviously none of the programs offer comprehensive facilities but all are genuinely functional. Being tape based is a problem but there is a disc version for those who have one.

At £5.95 it has to be worth considering.

Bubloid

A new program has arrived from Software Farm — the company which has somehow managed to get high resolution programming from the ZX81 and produce games that have made the odd Spectrum owner jealous.

The game — *Rocket Man* — is basically of the platforms and ladders variety with plenty of other things thrown in. The aim of the game is to collect diamonds from one side of the screen with the aid of a freshly fueled rocket pack found on the opposite side.

To get the fuel you must run and jump along the platforms and up and down the ladders collecting the fuel pods necessary for the flight to the diamonds. However, your flight can become blocked by a rampant bubloid which does unpleasant things to you if it catches you.

Later screens have more complex mazes of ladders and replace the jet pack with a vulture (which requires legs of lamb rather than fuel for sustenance.)

Arcade fans who are still sticking to their ZX81 shouldn't miss this one.

Pick of the week

About *Deus ex Machina* there is almost too much to say.

It's like a breath of fresh air compared with 99% of the material I receive each week — all the colourful multi-screen collect the... and dodge the... but watch out for the... loony len, digger dan, furtive freddie and other alliterative non-entities which pass for inventiveness.

Deus ex Machina is different. About as different and as rare as a truly great pop song. It is a completely new computer experience.

Above all, *Deus ex Machina* brings drama to computer software (aside from a host of specific new ideas — of which more in a moment). Not the drama of the dreaded bulbous thwarks threatening your laser base (heavens!) or the snapping blimps which bounce a round the higher levels on the sixth screen (gosh!) but the drama of the widescreen epic. Not profound maybe, but still able to stir the emotions a little.

To specifics: *Deus ex Machina* is a package consisting of two tapes and a poster-come-script on which the words to the songs and the dialogue is printed. The first tape is around 80K of computer program, loaded, obviously in two sections. The second tape contains music, singing and dialogue and features notables like Ian Dury, EP Thompson, Jon Pertwee, Dorna Bailey (OK, so she isn't all that notable but she should be) and, playing the baddie, Frankie Howard.

This tape is ingeniously synchronised to the computer tape via a counted into by John Pertwee after which the whole music and animation drama unfolds. The plot, is part sf, part fairy tale, part bleak 1984 totalitarian vision and concerns itself with the constant Automata themes of non-violence, non-sexism, humour, irreverence and not least, determined unconventionality. It is the story of the creation of life by the

Movie, movie

'central computer' from a quantity of mouse droppings deposited shortly before the death of the last mouse on Earth.

I have no idea whether the plot is profound or silly at the moment as I haven't had time to study it too closely but either way, the computer graphics are just about as good as they could be on the Spectrum.

The computer 'movie' can be thought of as a number of very original and very abstract ar-

cade games strung together in a logical sequence. Since tape and computer are linked you never actually fail in the sense of 'game over' or succeed in the sense of 'making it to the final level' or whatever. What you can affect is the 'life' level — a percentage figure that changes throughout.

For example, in the initial section the first strands of DNA must be kept alive by your cursor — the baddies are, at all times, trying to prevent life forming. The screen displays beautifully detailed slowly turning strands, the music plays, and like some abstract version of plate spinning you move your cursor around. It's satisfying as an arcade game but quite different from the usual zapping experience.

If it has a fault it is only a doubt in my mind about whether you will want to play *Deus ex Machina* over and over — maybe it will suffer a similar fate to all those horrendous seventies concept albums. Whatever happens *Deus ex Machina* is a brave new idea.

Stageplay

Hutchinson Computer Publishing is a section of the Hutchinson book publishing group shortly to release two programs for the Spectrum — similar in format but differing in plot — two programs for the Spectrum *Fire on the Water* and *Flight from the Dark*.

These are also Parts 1 and 2 of the Lone Wolf role-playing adventure books and the plot of both game and book is the same.

What you get, essentially, is the book but with all the decisions you make illustrated by animated graphics — the end result is superb, a little like *Valhalla* in some ways but quite original in its approach.

You begin in *Flight from the Dark* at a monastery where you decide how equipped for the adventure to come you will be. This takes the form of a fight with your master — there are keyboard controls for Thrust, Parry, Advance, Retreat etc and you battle it out with the Computer-controlled master. How well you do determines much of what will follow.

The monastery is attacked and you begin the adventure — half the screen becomes like the stage of a theatre you walk on and text describes the location and lets you choose from a

You find objects, baddies, goodies, shelter, danger, quests, a wide variety of weapons and hundreds of different screens of adventure. You get arcade spills and thrills by doing battle via the keyboard with a wide variety of odious looking monsters and you get the more cerebral pleasure by deciding what action to take at each point, as in an adventure. The programs complete with booklet and overlay will cost £8.95 which is definitely cheap. number of options. Whatever you choose the scene will change with 'curtains' opening and closing to shift the scene.

Bouncing

Tiler is a high-resolution arcade game from Interceptor Micro's that gets a few extra brownie points for bizarreness whatever else.

The idea is to tile the roof of Rob Rubber (hey, guess what his chief quality is) getting the tiles from the garage via the garden and then fitting them in place.

Rob bounces around his house and gets in your way thereby making tiling extremely hazardous. And that's about it for the game really — you have stairs to climb and three screens of high-res house-complete with expensive looking sports car.

The graphics are nice and it's not a bad game in a lot of ways, though it's really only a grab and dodge game with good background graphics.

Program	<i>Tiler</i>
Price	£5.50
Micro	Spectrum
Supplier	Interceptor Micro's Lindon House The Green Tadley Hampshire

Bear boy

Cheetahsoft has released a number of games to tie in with the release of its new RAT remote control joystick. One of them at least stands in its own right as a good new Spectrum release — *Bear George*.

The game is divided into three parts spuriously linked by the fact that they all concern

the adventures of a bear called presumably, George.

George first has to stock up on apples to build up fat for the long winter's hibernation. This involves standing under trees (with your mouth open) you being a rather nice large spritz of a bear) this is pretty difficult, somewhat akin to trying to throw smarties in the air and catch them in your mouth. Occasionally a squirrel drops nasty garden apples on a life.

The next screen involves trying to avoid skiers on the way to your cave (some nice scenery here) and the final action involves avoiding a number of spiders which are bobbing up and down on their threads, (Nothing spectacular here but some pleasing graphics and good sound effects).

Program	<i>Bear George</i>
Price	£5.95
Micro	Spectrum
Supplier	Cheetah Soft 24 Ray Street

No strings

Terrahawks is the most recent program from CRL and is based on the recent puppet series by Jerry Anderson (responsible for the sublime *Thunderbirds* amongst many others). The company seems to be doing a number of games based on TV series — it has a *Magic Roundabout* program in progress also.

I must admit that I can't see that the plot of the game has much to do with the puppets, but then perhaps that doesn't matter very much.

The idea is to guide your

ship into a Black Hole, into which you've been sucked and search for a vortex which will, eventually lead you out through the various strata of the hole and into space once more.

The black hole is populated with huge green monoliths through which you must fly (unless you decide to blast them away). Radar can help you find the vortex but you will need your fuel and range metres since flying too high eats up energy quickly. Lower down, however, there are more monoliths.

Swings and roundabouts.

Monumental

Havoc is a pretty impressive new game for the Commodore 64 and, in a month or so, Spectrum. It's inspired by *Zaxxon* maybe, but graphically the game is fairly spectacular. You fly a delta type fighter through nearly ten minutes worth of the skyscrapers, roads, vast monumental columns of some strange almost deserted city. *Zaxxon* comes in with the viewpoint, edge on at around 45 degrees with the whole thing scrolling top right to bottom left across the screen.

The city is not completely deserted, of course, somewhere at the far end of your flight you might, but probably won't, manage to fight out what it is that is launching missiles and air mines towards you. But dangerous adversaries isn't really the major problem — your passage through the city is impeded by vast columns and giant brick walls through which, somehow, you have to manoeuvre — usually guiding the jet through the tiniest of gaps and holding your breath.

Water importance

I recently came down to London to cover the launch, at a hotel in Knightsbridge, of some new software for microcomputers.

It looked as if I was going to be very early, but as Knightsbridge is next door to Hyde Park, I went via the park to see if they had moved the Serpentine.

I came upon a cafe next to the water's edge, to find that the floor of the cafe was being sluiced with copious amounts of water. Living in the North West, with dire warnings of the consequences of wasting water being an everyday part of life, I was shocked.

How, I wondered, can the GLC get away with the law in such a blatant manner? It was then that I realised: there is no water shortage in the South East of England.

The release of more computer software, however marvellous, was not going to have any impact on the car wash firms of the North West (banned from using water). The operation of the car washes might now be controlled by use of microprocessors, (I do not know), but without water there was nothing the car washes could do.

This is the basic problem with informa-

tion technologies which is summed up in the (apocryphal?) story of the trade union leader in the USA confronted by a production line manned by robots. Yes, he agreed, the robots were doing a grand job and did not need to have rest breaks, but "Do robots buy cars?"

It is a common, and correct, argument: the world does not exist for machines, it exists for people, and the needs of people have to be met before the needs of machines.

If, at any point, we start to put the needs of machines before the needs of people, then we start a process of dehumanization.

If we produce a world where all cars are produced by robot, (until the oil runs out), the numbers of cars purchased will decline because robots will be fabricating most industrial goods, and people will be out of work. The profits of manufacturing industries will therefore decline as more robots are used, and fewer and fewer people are working and therefore able to buy manufactured goods.

Managers will disappear. Once dealing with people is removed, management is easily automated. At the same time the infrastructure of our nation will be in tatters, and already it is beginning to get increasingly more tattered.

It is all a matter of priorities. For example, solving all the problems of maldistribution of water would probably cost less than all the money the Government is currently wasting on information technology.

Isn't having an adequate water supply more important than spending money on teaching people how to use computers?

Leave learning about computers to private initiative, and let the Government spend money on useful tasks.

Water is more important than the Fifth Generation.

Boris Allan

Marathon jog

Puzzle No 124

Ever since it was announced that the town councillors would be running in the local marathon, a number of these worthy dignitaries have been seen jogging around the gardens in front of the town hall.

The garden is rectangular in shape, and is bordered by a pathway around its perimeter. It also has two diagonal pathways, which run from corner to corner.

Now the Lord Mayor has it on good authority from the County Surveyor, that if a runner starts at one corner of the gardens, runs one circuit of the perimeter path, crosses the first diagonal, then runs the lengths of the longer side a second time, and finally runs along the other diagonal, the route will be exactly one mile long.

What are the dimensions of the garden if the length, width and diagonals are all exact numbers in yards?

Solution to Puzzle No 119

From the information that we are given, we know that the width is between 9 and 100 feet, and the length — which is an exact multiple of the width is between 99 and 1000 feet. Further, these measurements and their product (the area), consist of the digits 0 to 9. Therefore, the area must have five digits.

```
10 FOR W = 10 TO 99
  20 FACTOR = 2
  30 L = W*FACTOR
  40 IF L < 100 THEN GOTO 190
  50 IF L > 999 THEN GOTO 210
  60 PRODUCT = L*W
  70 IF PRODUCT < 10000 THEN GOTO 190
  80 IF PRODUCT > 99999 THEN GOTO 210
  90 LS = STR$(L)
  100 WS = STR$(W)
  110 PS = STR$(PRODUCT)
  120 TS = RIGHT$(LS) + RIGHT$(WS) + RIGHT$(PS)
  130 FOR N = 1 TO 9
    140 FOR M = N + 1 TO 10
      150 IF MID$(TS, N, 1) = MID$(TS, M, 1) THEN GOTO 190
      160 NEXT M
    170 NEXT N
  180 PRINT WS, LS, PS
  190 FACTOR = FACTOR + 1
  200 GOTO 30
  210 NEXT W
```

Note that lines 90-170 combine the three dimensions for duplication of digits. This reveals the solution: Width = 27 feet, Length = 594 feet, and Area = 16038 square feet.

Winner of Puzzle No 119

The winner is: Paul Thomas, Heol-y-Forlan, Cardiff, who receives £10.

Rules

If the puzzle prize can be sensibly solved using a computer then the winner will have included a listing of the program used to find the correct answer. The closing date for entries to Puzzle No 124 is September 29.
